

Publication Summary

Cancer Incidence in Scotland (2011)

Publication date – 30 April 2013

About this Release

This release updates the number of cancer registrations in Scotland from 1987 to 2010 and adds registrations for 2011. Approximately 45 types of cancer are included, broken down by age group, sex, NHS Board and Cancer Regional Network.

Key Points

- Over the last ten years, age-standardised incidence rates of cancer in Scotland have fallen by 3% in males but increased by 9% in females.
- Cancer incidence rates and trends in incidence rates show considerable variation between different types of cancer.
- Actual numbers of cases of cancer have risen over the last decade. This is likely to be largely due to an ageing population.
- Two in five people in Scotland will be diagnosed with some form of cancer during their lifetime. This includes cancers that will have no detrimental impact on life expectancy, such as indolent prostate tumours.
- It is estimated that there are 165,000 individuals who have been diagnosed with cancer over the last 20 years in Scotland and who are still alive. This is approximately 3% of the population of Scotland.
- Details of these statistics can be found by cancer site on the ISD [cancer website](#) and summarised in the [Cancer in Scotland](#) summary report.

Background

The [Scottish Cancer Registry](#) has been collecting information on cancer since 1958. Data collected by the Registry are published by ISD and are used for a wide variety of purposes including: public health surveillance; health needs assessment, planning and commissioning of cancer services; evaluation of the impact of interventions on incidence and survival; clinical audit and health services research; epidemiological studies; and providing information to support genetic counselling and health promotion.

The updated figures show cancer incidence (1987-2011) for many types of cancer, and replace information previously available on the ISD Scotland website. Cancer registrations are believed to be essentially complete for the year 2011, but it is important to note that the cancer registration database is dynamic. In common with cancer registries in other countries, cancer incidence rates in Scotland can take up to five years after the end of a given calendar year to reach 100% completeness and stability, due to the continuing accrual of late registrations coming to light through death certification, for example.

It may be misleading to focus too much attention on any apparent changes in incidence between 2010 and 2011; it is more informative to examine trends in incidence observed over a number of years. Striking changes from one year to the next may occur in the case of rare cancers, but these are likely to reflect random fluctuation caused by small numbers of cases. In such cases it is even more important to examine incidence rates for a number of years aggregated together, rather than focussing on a single year of incidence.

About ISD

Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up. Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Official Statistics

Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of 'Official Statistics'. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

Further information on ISD's statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the [ISD website](#) www.isdscotland.org/About-ISD/About-Our-Statistics/
