Publication Report

Abortion Statistics
Year ending 31 December 2011
Publication date – 29 May 2012

A National Statistics Publication for Scotland
About ISD

Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up.

Information Services Division (ISD) is a business operating unit of NHS National Services Scotland and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

**Purpose:** To deliver effective national and specialist intelligence services to improve the health and wellbeing of people in Scotland.

**Mission:** Better Information, Better Decisions, Better Health

**Vision:** To be a valued partner in improving health and wellbeing in Scotland by providing a world class intelligence service.

Official Statistics

Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

ISD’s statistical publications are currently classified as one of the following:

- National Statistics (ie assessed by the UK Statistics Authority as complying with the Code of Practice)
- National Statistics (ie legacy, still to be assessed by the UK Statistics Authority)
- Official Statistics (ie still to be assessed by the UK Statistics Authority)
- other (not Official Statistics)

Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics. Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.
Introduction

Induced abortion (sometimes referred to as ‘termination of pregnancy’) is carried out under the terms of the Abortion Act 1967, which applies to England, Wales and Scotland. Two doctors must agree that termination of pregnancy is necessary for one of the grounds, specified in the 1991 Regulations; these are classified by the letters A to E (see Glossary). There is a legal requirement to notify the Chief Medical Officer in Scotland of all terminations carried out in Scotland. The Information Services Division is responsible for the collation of data derived from notifications of abortions on behalf of the Chief Medical Officer in Scotland.

The quality of the data is thought to be high, although occasional omissions and administrative errors in submitting notification forms are inevitable, leading to some under-reporting. All late submissions of notification forms are included in the following year’s statistics release as revised figures.

In this 2011 statistics release, a small number of abortion notifications with outstanding data queries have been excluded. There are approximately 120 such queries (about 1% of the total), which will not significantly alter the interpretation of the data. These data will be included in the 2012 report, due to be published in 2013.

The most significant growth in abortions occurred in the four years immediately following the implementation of the 1967 Abortion Act, with numbers rising from 1,500 in 1967 to over 7,500 in 1971. Since then, numbers and rates continued to rise, reaching a peak in 2008 of 13,903 then falling in the last three years.

Prior to 1991, most terminations were performed surgically. In 1991 medical methods of termination were licensed for use in the United Kingdom. Medical methods of termination are carried out using drugs such as mifepristone and prostaglandin. The Abortion (Scotland) Regulations 1991 reflect this change in abortion provision and also place an upper limit of 24 weeks on abortions for most reasons. We recently introduced data on abortions carried out on gestations less than 9 completed weeks (63 days) to monitor the NHS Quality Improvement Scotland (now NHS Healthcare Improvement Scotland) standard introduced in March 2008 that 70% of women seeking terminations of pregnancy undergo the procedure at less than 9 completed weeks (ie less than 63 days) gestation.
Key points

- For the past three years there has been a fall in the number and rate of abortions with 12,471 in 2011 compared to 13,903 in 2008 (representing rates of 12.0 per 1000 women aged 15-44 in 2011, and 13.3 in 2008). This fall is a change to the overall pattern of increase since the implementation of the 1967 Abortion Act, although small dips for short periods have been observed before. Birth rates also peaked in 2008, but whereas there has been a 9.5% fall in abortion rates between 2008 and 2011, there has only been a 2.4% (NRS; 2011 Births, Deaths and Other Vital Events - Preliminary Annual Figures; Table P1) fall in birth rates over this period.

- The fall in abortion rates between the peak of 2008 and 2011 has been greatest in younger women, with a reduction of 22% in those aged under 20.

- Although there has been recent marked reduction in abortions in younger women, the rate of terminations in 2011 is still highest in this group, at 18.8 per 1000 aged 16-19 and 21.7 per 1000 in those aged 20-24. Lower rates are seen in the older age groups; women aged 25-29 (15.6 per 1000); aged 30-34 (10.9 per 1000); aged 35-39 (6.2 per 1000) and in women aged over 40 (2.3 per 1000).

- The proportion of early terminations has been rising steadily in recent years, with 65.5% of all terminations performed at less than 9 weeks in 2011, compared to 62.2% in 2009. There has also been a sustained increase in the use of medical methods compared to surgical terminations.

- In 2011, the rate of abortions continues to show a clear link with the level of deprivation. In areas of high deprivation the rate is 16.0 per 1000, nearly double the rate of 8.5 per 1000 for the least deprived areas of Scotland.

- More than a quarter (29.0%) of the 12,471 women having a termination in 2011 had a previous termination. The proportion of women having had a previous termination varies across NHS boards from 21.9% in the NHS Highland to 35.5% in NHS Tayside.

- In 2011, the vast majority (11,616; 93.0%) of terminations were carried out under Ground C. There were 136 terminations carried out under Ground E of which 33 were for Down’s syndrome, 15 for other chromosomal conditions, 9 for anencephaly with the remaining 79 being for spina bifida and other conditions.
Results and Commentary

Abortions performed in Scotland; 1968 – 2011

For the past three years there has been a fall in the number and rate of abortions with 12,471 in 2011 compared to 13,903 in 2008 (representing rates of 12.0 per 1000 women aged 15-44 in 2011, and 13.3 in 2008). This fall is a change to the overall pattern of increase since the implementation of the 1967 Abortion Act, although small dips for short periods have been observed before. Birth rates also peaked in 2008, but whereas there has been a 9.5% fall in abortion rates between 2008 and 2011, there has only been a 2.4% (NRS; 2011 Births, Deaths and Other Vital Events - Preliminary Annual Figures; Table P1) fall in birth rates over this period.

Post-2007, a fall in abortion rates was observed in England & Wales, starting more than a year earlier than the Scottish fall. England and Wales rates have fluctuated little over the last 3 years (2009 - 17.0, 2010 - 17.1, 2011 - 17.2 per 1000 women aged 15-44) and remain higher than those of Scotland.

\(^r\) Revised.
Age of women

As in previous years, the rate of terminations in 2011 was highest in younger women, 16-19 (18.8 per 1000) and those aged 20-24 (21.7 per 1000). Lower rates are seen in the older age groups; women aged 25-29 (15.6 per 1000); aged 30-34 (10.9 per 1000); aged 35-39 (6.2 per 1000) and in women aged over 40 (2.3 per 1000).

The fall in abortion rates between the peak of 2008 and 2011 has been greatest in younger women compared to older women, with a reduction of 22% in those aged under 20.

The chart below shows the percentage distribution by age (see Table 1 for rates).

Table 2: Abortions by age, deprivation, gestation, method, repeat abortions, grounds for termination and NHS board of residence

Table 5: Abortions by age and by local council area of residence

Table 7: Abortions by age and year
Estimated gestation

The proportion of early terminations has been rising steadily in recent years, with 65.5% of all terminations performed at less than 9 weeks in 2011, compared to 62.2% in 2009.

The chart below shows the percentage breakdown by gestation. The dashed line represents terminations performed under 9 completed weeks gestation (63 days), which is a subset of the under 10 week group.

* Subset of under 10 week group.

Further information about termination of pregnancy key clinical indicators (KCI’s) can be found on the KCI for Sexual Health Publication webpage.

For further information on terminations by estimated gestation see:

Table 1: Abortions by place, age, deprivation, gestation, parity, repeat abortions and grounds for termination; Scotland

Table 2: Abortions by age, deprivation, gestation, method, repeat abortions, grounds for termination and NHS board of residence

Table 8: Abortions by estimated gestation
Method of termination

The use of medical methods compared to surgical methods continues to increase, with 73.5% of terminations (at all gestations) performed medically in 2011, a rise from 16.4% in 1992. Of terminations performed at less than 9 weeks gestation, 84.3% are now carried out medically (see Table 2 for terminations under 9 completed weeks).

r Revised.

For further information on method of termination see:

**Table 2: Abortions by age, deprivation, gestation, method, repeat abortions, grounds for termination and NHS board of residence**

**Table 9: Abortions by method of termination**
NHS board of residence

Although the data refer to the board of residence of the patient rather than the board within which the termination is performed, it is possible that people who are temporarily resident in a particular board, such as students, will have their residence ascribed to their temporary address, whereas the denominators are based on permanent residents. This may give artificially high rates in areas where there is a high proportion of temporary residents, for example, where there are many students. Similarly, some women travel to Scotland from countries where abortions are not so accessible and may be counted as Scottish residents if they provide a temporary Scottish address/postcode.

The rates of terminations are highest in NHS Tayside (15.0 per 1,000 women aged 15-44), which is a slight rise from the figure of 14.7 in 2010. The next highest board is Lothian, at 12.9 per 1,000 women. The lowest rate is 5.4 per 1,000 women in the Island boards, with the lowest mainland board being Highland at 10.5 per 1,000 women.

Deprivation

In 2011, the rate of abortions continues to show a clear link with the level of deprivation. In areas of high deprivation the rate is 16.0 per 1000, nearly double the rate of 8.5 per 1000 for the least deprived areas of Scotland. The differences in rates in deprivation vary across NHS boards.

Source: Notifications (to the Chief Medical Officer for Scotland) of abortions performed under the Abortion Act 1967

1 Refers to therapeutic abortions notified in accordance with the Abortion Act 1967.
2 Grounds for termination
A - the continuance of the pregnancy would involve risk to the life of the pregnant women greater than if the pregnancy were terminated.
B - the termination is necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman.
C - the pregnancy has NOT exceeded its 24th week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the pregnant woman.
D - the pregnancy has NOT exceeded its 24th week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the existing child(ren) of the family of the pregnant woman.
E - there is substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped.
F - it was necessary to save the life of the woman.
G - it was necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman.

Glossary

Abortion refers to therapeutic abortions notified in accordance with the Abortion Act 1967.

Approved place defined as in Section 1(3) of the Abortion Act 1967.

Grounds for Abortion as some notifications record more than one Statutory Ground, the numbers and percentages of Grounds exceed the total number of abortions.

Medical termination involves termination of a pregnancy without a surgical procedure. It usually involves oral administration of a drug followed 1-3 days later by vaginal administration of another drug.

NRS National Records of Scotland.

Parity the number of previous completed pregnancies.

Grounds for termination

Non-Emergency

A - the continuance of the pregnancy would involve risk to the life of the pregnant women greater than if the pregnancy were terminated.

B - the termination is necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman.

C - the pregnancy has NOT exceeded its 24th week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the pregnant woman.

D - the pregnancy has NOT exceeded its 24th week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the existing child(ren) of the family of the pregnant woman.

E - there is substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped.

Emergency

F - it was necessary to save the life of the woman.

G - it was necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman.

A3 – Early Access details (including Pre-Release Access)

Pre-Release Access

Under terms of the "Pre-Release Access to Official Statistics (Scotland) Order 2008", ISD are obliged to publish information on those receiving Pre-Release Access ("Pre-Release Access" refers to statistics in their final form prior to publication). The standard maximum Pre-Release Access is five working days. Shown below are details of those receiving standard Pre-Release Access and, separately, those receiving extended Pre-Release Access.

Standard Pre-Release Access:

Scottish Government Health Department
NHS Board Chief Executives
NHS Board Communication leads

Extended Pre-Release Access

Extended Pre-Release Access of 8 working days is given to a small number of named individuals in the Scottish Government Health Department (Analytical Services Division). This Pre-Release Access is for the sole purpose of enabling that department to gain an understanding of the statistics prior to briefing others in Scottish Government (during the period of standard Pre-Release Access).

Scottish Government Health Department (Analytical Services Division)

Early Access for Quality Assurance

These statistics will also have been made available to those who needed access to help quality assure the publication:
