

Publication Summary

National Drug and Alcohol Treatment Waiting Times Report

July - September 2011

20 December 2011

About this Release

This release from the new Drug and Alcohol Treatment Waiting times Database includes quarterly data from 1st July 2011 to 30th September 2011 at National, Health Board and Alcohol and Drug Partnership (ADP) level. Information on the number of clients seen, the time waited and types of treatment accessed is included. This is the second quarter of data from the new database which presents waiting times data for the full client journey for both drugs and alcohol.

The national HEAT (Health improvement, Efficiency, Access, Treatment) target A11 expects that by March 2013, 90% of people who need help with their drug or alcohol problem will wait no longer than three weeks for treatment that supports their recovery.

Key Points

- In July - September 2011, of the 10,718 drug and/or alcohol clients who started their first treatment 84% had waited 3 weeks or less. This represents an increase of approximately 1% on the previous quarter.

Completed waits for Referral to Treatment, Scotland,
July - September 2011

- Approximately 87% of the 7,088 clients who started alcohol treatment between July and September 2011 had waited 3 weeks or less. This represents an increase of approximately 2% on the previous quarter.
- Approximately 80% of the 3,630 clients who attended an appointment for drug treatment waited 3 weeks or less. This is inline with the percentage for the previous quarter.
- Of those who were still waiting to start drug or alcohol treatment (3,963 clients), approximately 10% had waited more than 6 weeks at the end of September 2011. This is inline with the percentage for the previous quarter.

Background

Information about waiting times is collected using the new Drug and Alcohol Treatment Waiting Times Database which went live across Scotland on 1 April 2011. One of the benefits of the new system is that it enables the addition of new data items to measure the full wait from referral to treatment for both drug and alcohol services. Information is also collected on if clients *could not* or *did not* attend offered appointments and allows for periods of unavailability to be recorded, and can calculate the time clients wait for treatment. Prior to the introduction of the new database, information was only collected on drug treatment waiting times. Trend data for drugs prior to April 2011 is not published as the new data is not comparable with data from the old system.

It is important to be aware that some data quality issues may impact on analysis. The number of services submitting data varies from area to area and within areas across the data collection period. Additionally, there is a wide range of demand for substance misuse services across Scotland, and to meet this demand appropriately, services are tailored to local needs. Consequently, comparisons of data across Quarters, Health Boards and ADPs may be misleading and should be treated with caution. A minor change to the way waiting times is calculated has been made since the last publication affecting approximately 3% of records. The April – June data has been updated to reflect this. More details on the changes can be found [here](#).

About ISD

Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up. Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Official Statistics

Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of 'Official Statistics'. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

Further information on ISD's statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the [ISD website](#) www.isdscotland.org/About-ISD/About-Our-Statistics/
