Introduction

This publication presents data from the Drug and Alcohol Treatment Waiting Times database (DATWT). It includes details on the number of people waiting, the time waited to start drug or alcohol treatment, and information on specific interventions being accessed.

Waiting times are important to patients and are a high profile measure of how Scotland is responding to demands for services. Statistics on waiting times make it possible for a wide range of users to have a clear picture of this aspect of the performance of the NHS across Scotland.

The Scottish Government set a target that by March 2013, 90% of people who need help with their drug or alcohol problem will wait no longer than three weeks for treatment that supports their recovery. This was one of the national HEAT (Health improvement, Efficiency, Access, Treatment) targets, number A11. This target was achieved in March 2013 and has now become a standard.

This publication now presents data for clients in prison. However this is a new area of data collection and, like any new system, it will take time to embed and to assure the quality of the data. Consequently, prison waiting times data is published separately but is expected to be the same level of performance in line with the delivery of the HEAT standard for drug and alcohol treatment waiting times.

Information about waiting times for drug and alcohol treatment is provided by the treatment services and collected in the DATWT database which went live across Scotland on 1st October 2011. The DATWT database collates information about the length of time people wait for specialist drug and/or alcohol treatment after they have been referred to treatment services in Scotland.

Prior to the introduction of the database, information was only collected on drug treatment waiting times that were measured in two stages: the wait from receiving a referral to the date of assessment offered, and the wait from a care plan being agreed to the date that a treatment is offered. Because of the differences in the current and old data collection, it is not possible to directly compare drug waiting times from the DATWT database with those recorded under the former National Drug Waiting Times Information Framework.

This publication now shows performance against the standard for Lanarkshire and MELDAP (Midlothian and East Lothian) Alcohol and Drug Partnerships broken down by local authority areas. This publication also presents data for performance against the standard broken down by age group and gender.

ISD publish other information on drugs services which can be found at the following link: http://www.isdscotland.org/Health-Topics/Drugs-and-Alcohol-Misuse/Drugs-Misuse/Scottish-Drug-Misuse-Database/index.asp
**Key points**

- In April-June 2014, 96.8% of the 11,122 people who started their first drug or alcohol treatment waited 3 weeks or less (HEAT standard), compared to 96.1% in the previous quarter.

- 97.5% of the 7,315 people who started alcohol treatment between April - June 2014 waited 3 weeks or less, compared to 97.0% in the previous quarter.

- 95.5% of the 3,807 people who attended an appointment for drug treatment waited 3 weeks or less, compared to 94.4% in the previous quarter.

- Of the 2,920 people who were still waiting to start drug or alcohol treatment, 43 people, or 1.5%, had waited more than 6 weeks at the end of June 2014, compared to 75 people, or 2.4% in the previous quarter.

- This publication does not include complete data for June 2014 for NHS Lothian due to issues moving to a new Patient Management System (PMS).

**Results and Commentary**

**Interpreting the data**

While the data are considered to be of good quality, caution is still recommended when interpreting trends in these statistics for a few reasons:

There is a wide range of demand for substance misuse services across Scotland, and to meet this demand appropriately, services are tailored to local needs. In some Alcohol and Drug Partnership (ADP) areas, the impact of a single specialised service – for example, a crisis management centre – may dramatically alter the distribution of waiting times in that ADP.

Some of the ADPs and NHS Boards, particularly Island Boards, are treating a small number of people; caution is therefore recommended when interpreting differences in percentages in these organisations over time, as a small change in numbers of individuals can result in a large but potentially meaningless change in percentages.

Services are required to submit accurate and up-to-date information to the DATWT. It is the responsibility of the ADPs to ensure the compliance of the services, including prisons, in their area and to help them assure the quality of the data they submit. ISD continue to monitor the number of services submitting data, levels of submission and provide additional training where necessary. The DATWT web system also has inbuilt validation to ensure high quality data.

Although the number of services included in each quarter of data varies, the percentage of services submitting data (compliance) across Scotland is consistently greater than 95% therefore this has little effect on the comparability and reliability of data published. See Table 9 for information on compliance across Scotland.
This publication now includes waiting times data for drug and alcohol treatment in prisons. ISD are working with NHS boards and ADPs to ensure that compliance is high and that the data collected and submitted to the DATWT database is accurate and reliable. Currently 13 ADPs submit data for all 14 prisons in Scotland.

When DATWT data are extracted for reporting it is a snapshot of what is on the system at that time. The DATWT is a dynamic database, which means that data for previous quarters are updated and so may not be the same as found in previous publications for the same time period. Data for the most recent quarter is provisional and as such is subject to revisions in future publications. The revisions generally have a greater impact on the number and distribution of ongoing waits with the percentage waiting less than 3/5 weeks statistics likely to be revised upwards in future publications. Significant revisions are noted in the Publication Metadata section on page 11 of this report.

NHS Lothian has not been able to submit complete data for June 2014 due to issues moving to a new Patient Management System (PMS). The Board have advised that they hope to be able to submit data from June onwards in September. Information for quarter April to June 2014 would be updated in the next publication planned for December.

Drug and Alcohol Treatment Waiting times

The Scottish Government set a target (HEAT A11) that by March 2013, 90% of people who need help with their drug or alcohol problem will wait no longer than three weeks for treatment that supports their recovery. This target was achieved in March 2013 and has now become a HEAT standard.

HEAT standard
- In all NHS Boards in Scotland, at least 90% of people who started drug or alcohol treatment waited 3 weeks or less (Table 3).
- In April-June 2014, of the 11,122 people who started their first drug or alcohol treatment, 96.8% waited 3 weeks or less and 57.1% waited one week or less (Table 3).
- Of the 2,920 people who were still waiting to start drug or alcohol treatment at the end of June 2014, 43 people, or 1.5% had been waiting for more than 6 weeks (Table 6).

Figure 1 shows trend data for the proportion of people referred for drug and alcohol treatments in Scotland who are seen within three weeks. The figure shows improvements in performance since June 2012 for both drug and alcohol treatments.
- In April-June 2014, of those people who started their first alcohol treatment, 97.5% had waited 3 weeks or less compared to 89.8% in April-June 2012.
- In April-June 2014, of those people who started their first drug treatment, 95.5% had waited 3 weeks or less compared to 90.0% in April-June 2012.
Figure 1 People Referred for Drug or Alcohol treatment in Scotland: % seen within 3 weeks

Note: vertical axes do not start at the origin (zero)

First Treatments

This section includes information on people who began their first treatment or were waiting to begin first treatment for alcohol or drug use during April-June 2014.

Alcohol Treatment Waiting Times

In April - June 2014, 97.5% of the 7,315 people who began alcohol treatment waited 3 weeks or less from the date of referral (Table 3).
- 90% of people who started treatment in April-June waited 17 days or less (Table 1).
- In all NHS Boards in Scotland, at least 90% of people who started alcohol treatment waited 3 weeks or less (Table 3).

Of the 1,707 people in Scotland still waiting to start alcohol treatment at end of June 2014:
- Approximately 1.5% (25 people) waited more than 6 weeks (Table 6).
- In all NHS Boards in Scotland, at least 90% of people with ongoing waits for alcohol treatment had been waiting 6 weeks or less (Table 6).
Drug Treatment Waiting Times

In April-June 2014, of the 3,807 people who began drug treatment, 95.5% waited 3 weeks or less (Table 3).

- 90% of people who started treatment in April-June 2014 waited 18 days or less. (Table 1).
- In all NHS Boards in Scotland, at least 90% of people starting drug treatment waited 3 weeks or less (Table 3).

Of the 1,213 people who were still waiting to start drug treatment at the end of June 2014:

- Approximately 1.5% (18 people) had waited more than 6 weeks (Table 6).
- In all NHS Boards in Scotland, at least 90% of people with ongoing waits for drug treatment had been waiting 6 weeks or less (Table 6).

All Treatments

The DATWT Web system collects data on nine separate treatment types. These have been aggregated into 5 groups: Structured preparatory and motivational intervention; Prescribed drug treatment (includes prescribing by GP or specialist); Community based detoxification, community based support and/or rehabilitation (includes structured psychosocial interventions, structured day programmes and other structured), and Residential Detoxification and Rehabilitation (includes residential rehabilitation and residential detoxification/ inpatient treatment).

All Treatments includes any treatments for alcohol or drug use started during April-June 2014, which may be first or subsequent treatments.

8,474 alcohol treatments were started in Scotland in April-June 2014 (Table 7).

- Structured preparatory and motivational intervention was the most frequently accessed alcohol treatment (4,385 treatments between April-June 2014).
- Community based support and/or rehabilitation was also a common alcohol treatment with 3,335 treatments started in April-June 2014.

4,647 drug treatments were started in Scotland in April-June 2014 (Table 7).

- Structured preparatory and motivational intervention was the most frequently accessed drug treatment (1,930 treatments between April-June 2014).
- Community based support and/or rehabilitation was also a common drug treatment with 1,815 treatments started in April-June 2014.

All tables mentioned can be accessed via the spreadsheet at this link.

Demographic Data

Demographic data has only been provided for non-anonymous clients as age data is not available for anonymous clients. The percentage of anonymous clients in Scotland for Apr-Jun 2014 is 20.8% (Table 4).

- In April-June 2014, of the 8,806 non-anonymous clients who started their first drug or alcohol treatment, 69.6% were male and 30.4% were female (Table 1).
The age group with the highest percentage of people starting treatment for drug or alcohol misuse was 40+ years, with 55.0% of males and 53.8% of females in that age group (Table 1).

Of the people starting treatment for alcohol misuse in Apr-Jun 2014, 68.3% of males and 69.1% of females were in the 40+ age group (Table 1).

For drug misuse, the age group with the highest number of people starting treatment was 30-39 years, with 41.5% of males and 43.4% of females in that age group for Apr-Jun 2014 (Table 1).

In April-Jun 2014, of the 8,806 non-anonymous clients who started their first drug or alcohol treatment, 96.5% of males and 96.8% of females waited 3 weeks or less (Table 2).

97.7% of the 3,903 males and 97.3% of the 1,760 females who started alcohol treatment between April - June 2014 waited 3 weeks or less (Table 2).

94.5% of the 2,226 males and 95.7% of the 917 females who started drug treatment between April - June 2014 waited 3 weeks or less (Table 2).

The demographic data tables can be accessed via the spreadsheet at this link.

Drug and Alcohol Treatment Waiting Times for clients in prison

In April-June 2014, of the 1,080 people who started their first drug or alcohol treatment, 97.1% had waited 3 weeks or less and 79.7% had waited one week or less (Table 1).

Of the 64 people who were still waiting to start drug or alcohol treatment at the end of June 2014, 2 people (3.1%) had been waiting for more than 6 weeks (Table 2).

97.7% of the 347 people who started treatment for alcohol use between April and June 2014 had waited 3 weeks or less (Table 1).

96.9% of the 733 people who started treatment for drug use waited 3 weeks or less (Table 1).

Prison data tables can be accessed via the spreadsheet at this link.
Service compliance

In April - June 2014, 241 out of 251 (96.0%) services submitted data. Two services within East and Mid Lothian were non compliant due to the new TRAK system and data migration issues. This was also the case for Edinburgh City ADP who reported seven non compliant services due the new TRAK system and data migration issues. One service was recorded as non complaint within West Lothian for the reasons noted above.

12 out of 14 prisons (85.7%) submitted data for April - June 2014. HMP Addiewell was non compliant due to incomplete data which was attributed to lack of administrative support. However, West Lothian ADP and other service providers are supplying support to improve compliance for next quarter. HMP Low Moss was also non compliant due to staff sickness.

ADPs are asked to encourage services under their respective remits to submit data; Table 9 in the April - June 2014 DATWT Tables shows the number of services returning data within each ADP.

Table 3 in the April - June 2014 DATWT Prison Tables shows the number of ADPs returning data for prisons.

A1 – Background Information

The National Drug Waiting Times Information Framework was introduced in October 2004. This included guidance and definitions on data items to be collected for drug waiting times. The aim of the framework was to give Alcohol and Drug Action Teams (ADATs) a consistent structure for local monitoring of treatment services.

In February 2007, ISD provided ADATs with a revised data collection system that enabled ADATs to produce a wider range of reports and also provided the facility for ADATs to monitor data quality more easily.

Operational structures changed in October 2009, when the 22 ADATs were dissolved and replaced by 30 Alcohol and Drug Partnerships (ADPs). The Waiting Times Framework was designed to function at ADAT level.

In October 2011 an improved Drug and Alcohol Treatment Waiting Times Database went live across Scotland. This was the first time that data on alcohol as well as drug treatments was recorded nationally, and the first time information was available on the full client journey from assessment to treatment. This database also facilitates reporting at ADP level.

The benefits of the database are:

- ADPs have more accurate waiting times information to monitor equity of access for drug and alcohol clients across their local area.
- ADPs can use this information to hold meaningful, informed discussions with agencies about blockages in the system.
- ADPs will be able to monitor levels of non-attendance and long waits and use this information for service redesign.
- ADPs can monitor their progress towards the HEAT target, services with long waits, and records which have not been updated.
- ADPs can measure the full wait from Referral to Treatment in one stage.
- The database records periods of unavailability so a service is not penalised if, for example, a client is on holiday or in prison.
- Nine different treatment ‘types’ are recorded giving a more specific detailed breakdown of the kind of treatments being accessed by clients.

The responsibility for provision of healthcare to prisoners in Scotland was transferred from the Scottish Prison Service (SPS) to the NHS on 1st November 2011. ADPs are now responsible for the collection and submission of Drug and Alcohol Treatment waiting times in prisons.

</table>
| Revisions relevant to this publication | Historic data has been revised to account for waiting times records which are belatedly updated on the web system and/or services which were previously not included for data quality reasons. The impact of these revisions are: **Quarterly trend (Apr-Jun 14):**
- Inverclyde ADP – Percentage starting treatment within 3 weeks increased from 89.5% in Jan-Mar 2014 to 96.5% in Apr-June 2014.
- Edinburgh City ADP – Percentage starting treatment within 3 weeks increased from 89.3% in Jan-Mar 2014 to 96.1% in Jan-Mar 2014.
- Mid Lothian – Percentage starting treatment within 3 weeks decreased from 98.2% in Jan-Mar 2014 to 90.9% in Apr-June 2014.
- Individual Board and ADP figures do not vary by more than 5 percentage points unless specified. |
<p>| Concepts and definitions | More information about the methods used to produce the drugs and alcohol waiting times statistics and guidance documents can be found on the ISD website: <a href="http://www.isdscotland.org/Health-Topics/Waiting-Times/Drugs-and-Alcohol">http://www.isdscotland.org/Health-Topics/Waiting-Times/Drugs-and-Alcohol</a> |

A3 – Early Access details (including Pre-Release Access)

Pre-Release Access

Under terms of the "Pre-Release Access to Official Statistics (Scotland) Order 2008", ISD are obliged to publish information on those receiving Pre-Release Access ("Pre-Release Access" refers to statistics in their final form prior to publication). The standard maximum Pre-Release Access is five working days. Shown below are details of those receiving standard Pre-Release Access and, separately, those receiving extended Pre-Release Access.

Standard Pre-Release Access:

- Scottish Government Health Department
- NHS Board Chief Executives
- NHS Board Communication leads
- Alcohol and Drug Partnership Coordinators
- Scottish Prison Service

Extended Pre-Release Access

Extended Pre-Release Access of 8 working days is given to a small number of named individuals in the Scottish Government Health Department (Analytical Services Division). This Pre-Release Access is for the sole purpose of enabling that department to gain an understanding of the statistics prior to briefing others in Scottish Government (during the period of standard Pre-Release Access).

- Scottish Government Health Department (Analytical Services Division)
- Scottish Government Justice Department (Analytical Services Division)

Early Access for Management Information

These statistics will also have been made available to those who needed access to ‘management information’, i.e. as part of the delivery of health and care:

- Scottish Government Drug Policy Unit
- Scottish Government Alcohol Policy Unit

Early Access for Quality Assurance

These statistics will also have been made available to those who needed access to help quality assure the publication:

- Alcohol and Drug Partnership Coordinators
A4 – ISD and Official Statistics

About ISD
Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up. Information Services Division (ISD) is a business operating unit of NHS National Services Scotland and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Purpose: To deliver effective national and specialist intelligence services to improve the health and wellbeing of people in Scotland.

Mission: Better Information, Better Decisions, Better Health

Vision: To be a valued partner in improving health and wellbeing in Scotland by providing a world class intelligence service.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

ISD’s statistical publications are currently classified as one of the following:

- National Statistics (i.e. assessed by the UK Statistics Authority as complying with the Code of Practice)
- National Statistics (i.e. legacy, still to be assessed by the UK Statistics Authority)
- Official Statistics (i.e. still to be assessed by the UK Statistics Authority)
- other (not Official Statistics)

Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website.
