National Drug and Alcohol Treatment Waiting Times
1 April – 30 June 2018

Publication date 25 September 2018
This is a National Statistics Publication

National Statistics status means that the official statistics meet the highest standards of trustworthiness, quality and public value. They are identified by the quality mark shown above.

They comply with the Code of Practice for statistics and are awarded National Statistics status following an assessment by the UK Statistics Authority’s regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

Find out more about the Code of Practice at:

Introduction

This publication presents data from the Drug and Alcohol Treatment Waiting Times database (DATWT). It includes details on the number of people waiting, the time waited to start drug or alcohol treatment, and information on specific interventions being accessed.

Waiting times are important to patients and are a high profile measure of how Scotland is responding to demands for services. Statistics on waiting times make it possible for a wide range of users to have a clear picture of this aspect of the performance of the NHS across Scotland.

The Scottish Government set a target that by June 2013, 90% of people who need help with their drug or alcohol problem will wait no longer than three weeks for treatment that supports their recovery. This was one of the national HEAT (Health improvement, Efficiency, Access, Treatment) targets, number A11. This target was achieved in June 2013 and has now become a Local Delivery Plan (LDP) standard.

This publication presents waiting times data for clients in prison. This is published separately from ADP data but is expected to be the same level of performance in line with the delivery of the LDP standard for drug and alcohol treatment waiting times.

Information about waiting times for drug and alcohol treatment is provided by the treatment services and collected in the DATWT database which went live across Scotland on 1st January 2011. The DATWT database collates information about the length of time people wait for specialist drug and/or alcohol treatment after they have been referred to treatment services in Scotland.

Prior to the introduction of the database, information was only collected on drug treatment waiting times that were measured in two stages: the wait from receiving a referral to the date of assessment offered, and the wait from a care plan being agreed to the date that a treatment is offered. Because of the differences in the current and old data collection, it is not possible to directly compare drug waiting times from the DATWT database with those recorded under the former National Drug Waiting Times Information Framework.

ISD publish other information on drugs services which can be found here.
Main Points

- In April-June 2018, 94.0% of the 11,750 people who started their first drug or alcohol treatment waited three weeks or less, similar to the same quarter last year (94.2%).
  - For the 6,927 people seeking alcohol treatment, 94.1% waited three weeks or less, similar to the same quarter last year (94.9%).
  - For the 4,823 people seeking drug treatment, 93.7% waited three weeks or less, similar to the same quarter last year (93.2%).

- At the end of this quarter, 2,838 people were waiting to start their first drug or alcohol treatment, of which 241 (8.5%) had been waiting more than six weeks. This is an increase from the same quarter last year when 200 (6.6%) people were waiting more than six weeks.

- The quarterly trend over the past three years shows little change in performance.

- In prisons, 935 people started their first drug or alcohol treatment between April-June 2018, with 97.3% waiting three weeks or less and 68.7% waiting one week or less.

Results and Commentary

Interpreting the data

While the data are considered to be of good quality, caution is still recommended when interpreting trends in these statistics for a few reasons:

There is a wide range of demand for substance misuse services across Scotland, and to meet this demand appropriately, services are tailored to local needs. In some Alcohol and Drug Partnership (ADP) areas, the impact of a single specialised service – for example, a crisis management centre – may dramatically alter the distribution of waiting times in that ADP.

Some of the ADPs and NHS Boards, particularly Island Boards, are treating a small number of people; caution is therefore recommended when interpreting differences in percentages in these organisations over time, as a small change in numbers of individuals can result in a large but potentially meaningless change in percentages.

Services are required to submit accurate and up-to-date information to the DATWT. It is the responsibility of the ADPs to ensure the compliance of the services, including prisons, in their area and to help them assure the quality of the data they submit. ISD continue to monitor the number of services submitting data, levels of submission and provide additional training where necessary. The DATWT web system also has inbuilt validation to ensure high quality data.

A link to the Data Quality Pages can be found here:

http://www.isdscotland.org/Health-Topics/Waiting-Times/Drugs-and-Alcohol/Data-Quality/

Although the number of services included in each quarter of data varies, the percentage of services submitting data (compliance) across Scotland is consistently greater than 95% therefore this has little effect on the comparability and reliability of data published. See Table 9 for information on compliance across Scotland.

This publication includes waiting times data for drug and alcohol treatment in prisons. ISD are working with NHS boards and ADPs to ensure that compliance is high and that the data collected and submitted to the DATWT database is accurate and reliable. Currently 14 ADPs submit data for all 15 prisons in Scotland.

When DATWT data are extracted for reporting it is a snapshot of what is on the system at that time. The DATWT is a dynamic database, which means that data for previous quarters are updated and so may not be the same as found in previous publications for the same time period. Data for the most recent quarter is provisional and as such is subject to revisions in future publications. The revisions generally have a greater impact on the number and distribution of ongoing waits with the percentage waiting less than three/five weeks statistics likely to be revised upwards in future publications. Significant revisions are noted in the Publication Metadata section on page 20 of this report.
Drug and Alcohol Treatment Waiting times - First Treatments

This section includes information on people who began their first treatment or were waiting to begin first treatment for alcohol or drug use during April-June 2018.

Performance against Standard

It can be seen from Figure 1 that in the latest quarter (April-June 2018) all NHS Boards in Scotland, except NHS Highland, NHS Lothian, NHS Shetland and NHS Tayside, met the LDP standard that at least 90% of people who started drug or alcohol treatment waited three weeks or less.

Figure 1 People Referred for Drug and Alcohol treatment in Scotland: % waited less than three weeks and five weeks, all NHS Boards, April-June 2018

In April-June 2018, of the 11,750 people who started their first drug or alcohol treatment, 94.0% waited three weeks or less and 57.8% waited one week or less (Table 3). Of the 2,838 people who were still waiting to start drug or alcohol treatment at the end of June 2018, 241 people, or 8.5% had been waiting for more than six weeks (Table 6).
Figure 2 shows the performance against the standard by type of service.

In April-June 2018, 94.1% of the 6,927 people who began alcohol treatment waited three weeks or less from the date of referral (Table 3). In all NHS Boards in Scotland, except NHS Highland, NHS Lothian and NHS Tayside, at least 90% of people who started alcohol treatment waited three weeks or less (Table 3).

In April-June 2018, of the 4,823 people who began drug treatment, 93.7% waited three weeks or less (Table 3). In all NHS Boards in Scotland, except NHS Lothian, NHS Shetland, NHS Tayside and NHS Western Isles, at least 90% of people starting drug treatment waited three weeks or less (Table 3).

Figure 2 People Referred for Drug or Alcohol treatment in Scotland: % waited less than three weeks, All NHS Boards, April-June 2018

Figure 3 shows trend data for the proportion of people referred for drug and alcohol treatments in Scotland who are seen within three weeks. The quarterly trend over the past three years shows little change in performance. In April-June 2018, of those people who started their first alcohol treatment, 94.1% had waited three weeks or less compared to 96.2% in April-June 2015. In April-June 2018, of those people who started their first drug treatment, 93.7% had waited three weeks or less, compared to 93.9% in April-June 2015.
Figure 3 People Referred for Drug or Alcohol treatment in Scotland: % waited less than three weeks, trend over time

Please note that the vertical axis on this chart does not start at the origin (zero)

All Treatments

The DATWT Web system collects data on nine separate treatment types. These have been aggregated into five groups: Structured preparatory and motivational intervention; Prescribed drug treatment (includes prescribing by GP or specialist); Community based detoxification, community based support and/or rehabilitation (includes structured psychosocial interventions, structured day programmes and other structured), and Residential Detoxification and Rehabilitation (includes residential rehabilitation and residential detoxification/inpatient treatment).

All Treatments includes any treatments for alcohol or drug use started during April-June 2018, which may be first or subsequent treatments.

- 8,056 alcohol treatments were started in Scotland in April-June 2018 (Table 7).
  - Structured preparatory and motivational intervention was the most frequently accessed alcohol treatment (4,318 treatments between April-June 2018).
  - Community based support and/or rehabilitation was also a common alcohol treatment with 2,989 treatments started in April-June 2018.
• 5,705 drug treatments were started in Scotland in April-June 2018 (Table 7).
  o Structured preparatory and motivational intervention was the most frequently accessed drug treatment (2,737 treatments between April-June 2018).
  o Community based support and/or rehabilitation was also a common drug treatment with 2,102 treatments started in April-June 2018.

All tables mentioned can be accessed via the spreadsheet at this link.

Demographic Data
Demographic data has only been provided for non-anonymous clients as age data is not available for anonymous clients. The percentage of anonymous clients in Scotland from 1 April 2017 to 31 March 2018 is 13.9%. (Table 3)

• Of the 37,872 people who started their first drug or alcohol treatment from 1 April 2017 to 31 March 2018, 26,434 (69.8%) were male and 11,438 (30.2%) were female. (Table 1).
  o The age group with the highest number of people starting treatment for alcohol or drug misuse was 50+ years, with 7,568 (69.3%) of males and 3,356 (30.7%) of females in that age group (Table 1).

**Figure 4** shows the performance against the standard by type of service.

It can be seen from figure 4 that for year ending March 2018, of the people starting treatment for alcohol misuse, 6,414 (68.3%) of males and 2,983 (31.7%) of females were in the 50+ age group.
Figure 4 Number of completed alcohol waits in Scotland by age group and gender for year ending March 2018

Figure 5 shows the performance against the standard by type of service. It can be seen from figure 5 that for year ending March 2018, the age group with the highest number of people starting treatment for drug misuse was 30-39 years, with 4,188 (68.8%) of males and 1,897 (31.2%) of females in that age group.
• Of the 37,872 clients who started their first drug or alcohol treatment, 93.7% of males and 92.3% of females waited 3 weeks or less (Table 2).

• 94.7% of the 14,856 males and 93.3% of the 6,927 females who started alcohol treatment waited 3 weeks or less. (Table 2)

• 92.5% of the 11,578 males and 90.9% of the 4,511 females who started drug treatment waited 3 weeks or less. (Table 2)

Full year data tables can be accessed via the [spreadsheet at this link](#).

Ethnicity and disability status are optional for clients to complete within DATWT. Both fields have a high incomplete percentage for clients who started their first drug or alcohol treatment from 1 April 2017 to 31 March 2018.
• From 1 April 2017 to 31 March 2018, 36% of clients who started their first drug or alcohol treatment had no ethnic group recorded.

In the same period, the following ethnic origins were recorded for clients who started their first drug or alcohol treatment:

- 50.7% of clients were recorded as Scottish;
- 3.7% of clients were recorded as Other British;
- 1.2% of clients recorded their ethnic group as one of the following: African, African Scottish or African British, Any mixed or multiple ethnic group, Any other Asian ethnic group, Any other ethnic group, Any other white ethnic group, Arab, Arab Scottish or Arab British, Bangladeshi, Bangladeshi Scottish or Bangladeshi British, Black, Black Scottish or Black British, Caribbean, Caribbean Scottish or Caribbean British, Chinese, Chinese Scottish or Scottish British, Gypsy/Traveller, Indian, Indian Scottish or Indian British, Irish, Other African ethnic group, Other Caribbean or Black ethnic group, Pakistani, Pakistani Scottish or Pakistani British, Polish;
- 4.6% of clients were recorded as not known;
- 3.6% of clients were recorded as information not provided;
- 0.2% of clients were recorded as refused by the respondent.

• From 1 April 2017 to 31 March 2018, 86.5% of clients who started their first drug or alcohol treatment had no disability status recorded.

In the same period, the following disabilities were recorded:

- 1.6% of clients recorded their disability status as one of the following: Blindness or Partial Sight Loss, Deafness or Partial Hearing Loss, Developmental Disorder (e.g. Autistic Spectrum Disorder), English as a second Language, Learning Difficulty (e.g. Dyslexia), Learning Disability (e.g. Down’s Syndrome), Literacy Issues, Long term illness, disease or condition, Other condition/need, Physical Disability;
- 1.2% of clients recorded their disability status as Mental Health Condition;
10.6% of clients recorded their disability status as not applicable.

Drug and Alcohol Treatment Waiting Times for clients in prison

Performance against Standard

In April-June 2018, of the 935 people who started their first drug or alcohol treatment, 97.3% waited three weeks or less and 68.7% waited one week or less (Table 1). Of the 104 people who were still waiting to start drug or alcohol treatment at the end of June 2018, 29 people, or 27.9% had been waiting for more than six weeks (Table 2).

It can be seen from Figure 6 that in the latest quarter (April-June 2018) all NHS Boards in Scotland, met the LDP standard that at least 90% of people who started drug or alcohol treatment waited three weeks or less.

Figure 6 People referred for Drug and Alcohol treatment in Prisons in Scotland: % waited less than three weeks and six weeks, All NHS Boards, April-June 2018

Figure 7 shows the performance against standard in prisons by client type.
In April-June 2018, 100% of the 150 people who began alcohol treatment in prison waited three weeks or less from the date of referral. All NHS Boards in Scotland, met the LDP standard that at least 90% of people starting alcohol treatment waited three weeks or less (Table 1). Please note NHS Grampian and NHS Lanarkshire Prison Services had no completed alcohol waiting times for referral to treatment for the latest quarter (April-June 2018).

In April-June 2018, of the 785 people who began drug treatment in prison, 96.8% waited three weeks or less. All NHS Boards in Scotland, except NHS Lothian met the LDP standard that at least 90% of people starting drug treatment waited three weeks or less (Table 1).

Figure 7 People Referred for Drug or Alcohol treatment in Prisons in Scotland: % waited less than three weeks, All NHS Boards, April-June 2018

Prison data tables can be accessed via the [spreadsheet at this link](#).
Service compliance

Information on compliance can be found here: [spreadsheet at this link](#).

In April-June 2018, 226 out of 228 (99.1%) services submitted complete data.

All prisons submitted data for April-June 2018

ADPs are asked to encourage services under their respective remits to submit data. Table 9 in the April-June 2018 DATWT Tables shows the number of ADPs returning data within each Health Board.

Table 3 in the April-June 2018 DATWT Prison Tables shows the number of ADPs returning data for prisons. Information on compliance can be found here: [spreadsheet at this link](#).

Appendices

Appendix 1 – Background information

The National Drug Waiting Times Information Framework was introduced in January 2004. This included guidance and definitions on data items to be collected for drug waiting times. The aim of the framework was to give Alcohol and Drug Action Teams (ADATs) a consistent structure for local monitoring of treatment services.

In February 2007, ISD provided ADATs with a revised data collection system that enabled ADATs to produce a wider range of reports and also provided the facility for ADATs to monitor data quality more easily.

Operational structures changed in January 2009, when the 22 ADATs were dissolved and replaced by 30 Alcohol and Drug Partnerships (ADPs). The Waiting Times Framework was designed to function at ADAT level.

In January 2011 an improved Drug and Alcohol Treatment Waiting Times Database went live across Scotland. This was the first time that data on alcohol as well as drug treatments was recorded nationally, and the first time information was available on the full client journey from assessment to treatment. This database also facilitates reporting at ADP level.

The benefits of the database are:

- ADPs have more accurate waiting times information to monitor equity of access for drug and alcohol clients across their local area.
- ADPs can use this information to hold meaningful, informed discussions with agencies about blockages in the system.
- ADPs will be able to monitor levels of non-attendance and long waits and use this information for service redesign.
- ADPs can monitor their performance against the LDP standard, services with long waits, and records which have not been updated.
- ADPs can measure the full wait from Referral to Treatment in one stage.
- The database records periods of unavailability so a service is not penalised if, for example, a client is on holiday or in prison.
- Nine different treatment ‘types’ are recorded giving a more specific detailed breakdown of the kind of treatments being accessed by clients.

The responsibility for provision of healthcare to prisoners in Scotland was transferred from the Scottish Prison Service (SPS) to the NHS on 1st November 2011. ADPs are now responsible for the collection and submission of Drug and Alcohol Treatment waiting times in prisons.

Appendix 3 – Early access details

Pre-Release Access
Under terms of the "Pre-Release Access to Official Statistics (Scotland) Order 2008", ISD is obliged to publish information on those receiving Pre-Release Access ("Pre-Release Access" refers to statistics in their final form prior to publication). The standard maximum Pre-Release Access is five working days. Shown below are details of those receiving standard Pre-Release Access.

Standard Pre-Release Access:
- Scottish Government Health Department
- NHS Board Chief Executives
- NHS Board Communication leads
- Scottish Prison Service

Early Access for Management Information
These statistics will also have been made available to those who needed access to ‘management information’, i.e. as part of the delivery of health and care:
- Scottish Government Drug Policy Unit
- Scottish Government Alcohol Policy Unit

Early Access for Quality Assurance
These statistics will also have been made available to those who needed access to help quality assure the publication:
- Alcohol and Drug Partnership Coordinators
Appendix 4 – ISD and Official Statistics

About ISD
Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up.

Information Services Division (ISD) is a business operating unit of NHS National Services Scotland and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Purpose: To deliver effective national and specialist intelligence services to improve the health and wellbeing of people in Scotland.

Mission: Better Information, Better Decisions, Better Health

Vision: To be a valued partner in improving health and wellbeing in Scotland by providing a world class intelligence service.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

ISD’s statistical publications are currently classified as one of the following:

- National Statistics (ie assessed by the UK Statistics Authority as complying with the Code of Practice)
- National Statistics (ie legacy, still to be assessed by the UK Statistics Authority)
- Official Statistics (ie still to be assessed by the UK Statistics Authority)
- other (not Official Statistics)

Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website.
