Making an impact with data locally: Our story so far....

LIST was established in 2015 and during that time we have been working with Health and social care partnerships, Community Planning Partnerships, Local Authorities, voluntary Organisations, and more recently GP Clusters.

Our LIST multi disciplinary team consists of a variety of professionals, who have specialist knowledge and training where we have been supporting local priorities to co-produce and co-design local plans and performance measures.

As well as our local teams we have also helped our customers to connect to our specialist teams within ISD where additional support is available. This has not only further supported the emerging local needs and demands but also influenced and shaped some of our national products and services.

We are currently pulling together some of our stories so far in to one report which will be shared soon; “Making an impact with data locally: Our story so far” https://youtu.be/7nRWRC28kZo
Primary Care Update

LIST colleagues continue to work closely with Cluster Quality Leads and GP Clusters providing support around data and analytics. To ensure we continue to share emerging areas of interest to GP clusters and support our ‘Do it once for Scotland’ ambition, we are in the process of developing an ‘interactive’ Cluster map.

The interactive Cluster map will allow the user to select from an ‘emerging theme’ drop down menu which will then highlight those other clusters around Scotland that are also interested in the selected ‘topic’.

It is hoped this will be used as a tool to help facilitate local discussions as well as sharing learning’s across Scotland.

---

Health and Social Care Partnership Update

SOURCE The dataset for social care data has now been finalised and Local Authorities and Integration Authorities will be sharing the new data set with ISD in the next couple of months. Full details are available here: [http://www.isdscotland.org/Health-Topics/Health-and-Social-Community-Care/Health-and-Social-Care-Integration/Dataset/](http://www.isdscotland.org/Health-Topics/Health-and-Social-Community-Care/Health-and-Social-Care-Integration/Dataset/). The NSS-ISD Health and Social Care Team have already designed reports which include:

- Deprivation quintiles for each area,
- SPARRA score risk linked +/- social care package
- Care home data linked to A&E attendance;
- Home care clients with long term conditions identified from hospital admission
- Patient Pathways
- Costing of care: pathways & population matrix

If you want to find out more please contact your local LIST analyst. A contact list is available at [http://www.isdscotland.org/Health-Topics/Health-and-Social-Community-Care/Local-Intelligence-Support-Team/_docs/LIST-Contact-details-March-18.xlsx](http://www.isdscotland.org/Health-Topics/Health-and-Social-Community-Care/Local-Intelligence-Support-Team/_docs/LIST-Contact-details-March-18.xlsx).
**High Health Gain Individuals**

LIST colleagues are now able to request copies of ‘High Health Gain’ patient listings (generated by the NSS-ISD Health and Social Care team) for their board(s). This is in order to facilitate local analyses and analyses on behalf of GPs or GP clusters. There is a simplified data access form that should assist with any request.

The information generated is a list of patients predicted to be vulnerable and/or have complex needs in the coming year, i.e. the patients identified have the potential for ‘High Health Gain’. GP Practices are encouraged to review these lists and consider whether patients identified would benefit from Anticipatory Care Planning and/or additional support, a multi-disciplinary discussion and/or review.

It is hoped to make these data available to GPs via the PCI dashboards in the very near future, and a communication providing further information on that will be issued when the time comes.

LIST staff, and the NSS-ISD Health and Social Care team, are happy to discuss your information needs and find the best ways to meet them. We know that there are many different platforms & tools that can be used and LIST can help you to find the right source of information. LIST is unable to directly access local practice data but will work with local staff and e-Health facilitators to access data where possible. We are currently running pilot of forms (MoU & SOP) to cover Information Governance requirements, on data use and linkage in primary care. This pilot ends 30th April 2018 and following a review of that more information will be circulated to Clusters/practices.

**Community Planning Partnerships and LIST working together on:**

LIST continues to work with Community Planning Partnerships surrounding a variety of different initiatives and include;

- Prison leavers presenting to the Homeless Service and their healthcare usage
- Children affected by parental imprisonment
- Custodial medical care - transforming existing provision to a new model of care
- Prevention Plan performance indicators to provide guidance on a suite of indicators relating to Child Health, and other topics
- Data is created, collected and stored easily, but probably used sporadically. LIST working with CP Network to see how organisations can harness the power of this data and intelligence in a way that leads to bespoke service offerings for the communities?

For further information on any of the above please contact your local LIST analyst.

**4th Health & Social Care Gathering Event 19 Sept in West Park Conference Centre, Dundee**

We are currently finalising the programme for the day where the aim is to provide a range of talks & workshops on topics which are of interest across the health and social care looking at ways to improve health & wellbeing. We aim to include staff and volunteers/users from a wide range of organisations sharing their knowledge and experience to help integrate services putting customers at the heart of what is done. If you’d like to register your interest email NSS.LIST@nhs.net and we'll email out the finalised programme later in May.
