About this Release

Published for the first time, this release provides information on Quality Outcome Measure 10: Percentage of last 6 months of life spent at home or in a community setting. These data are shown by financial year from 2005/06 to 2009/10 at Scotland, Health Board, Council Area and Community Health Partnership level.

The measure is under development and the definitions are subject to change in light of stakeholder feedback. This may result in future revisions to the published data in accordance with ISD’s revisions policy.

Key Points

- At Scotland level, 2009/10 data shows that, on average, the proportion of the last 6 months of life spent at home or in a community setting is 90.7%.
- This represents a marginal increase from 90.4% in 2005/06.
- Across health boards, the proportion of the last six months of life spent at home or in a community setting in 2009/10 varies between 88.4% and 93.6%.

Background

This Quality Outcome Measure focuses on measuring the impact of “Living and Dying Well” and in particular on its objective to “produce achievable and measurable changes which will ensure quality improvement and enhance patient and carer experience”.

Percentage of End of Life Spent at Home or in a Community Setting

Financial years ending 31 March 2006 to 2010

30 August 2011
The proportion of time spent at home or in a community setting towards the end of life provides a high level indication of progress in implementation of the national action plan. These data can be inferred by measuring the amount of time spent in an acute setting during the last months of life (using hospital admissions data) and from this estimating the time spent at home or in a community setting.

It is envisaged that an increase in this measure will reflect both quality and value through more effective, person centred and efficient end of life care with people being better able to be cared for at home or closer to home with a planned approach to end of life care resulting in less time in an acute setting.

About ISD
Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up.
Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.
Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website www.isdscotland.org/About-ISD/About-Our-Statistics/
