

# Publication Summary

## Delayed Discharges in NHSScotland

### Occupied Bed Days in September 2015 and Census Figures for October 2015

Publication date – 24 November 2015

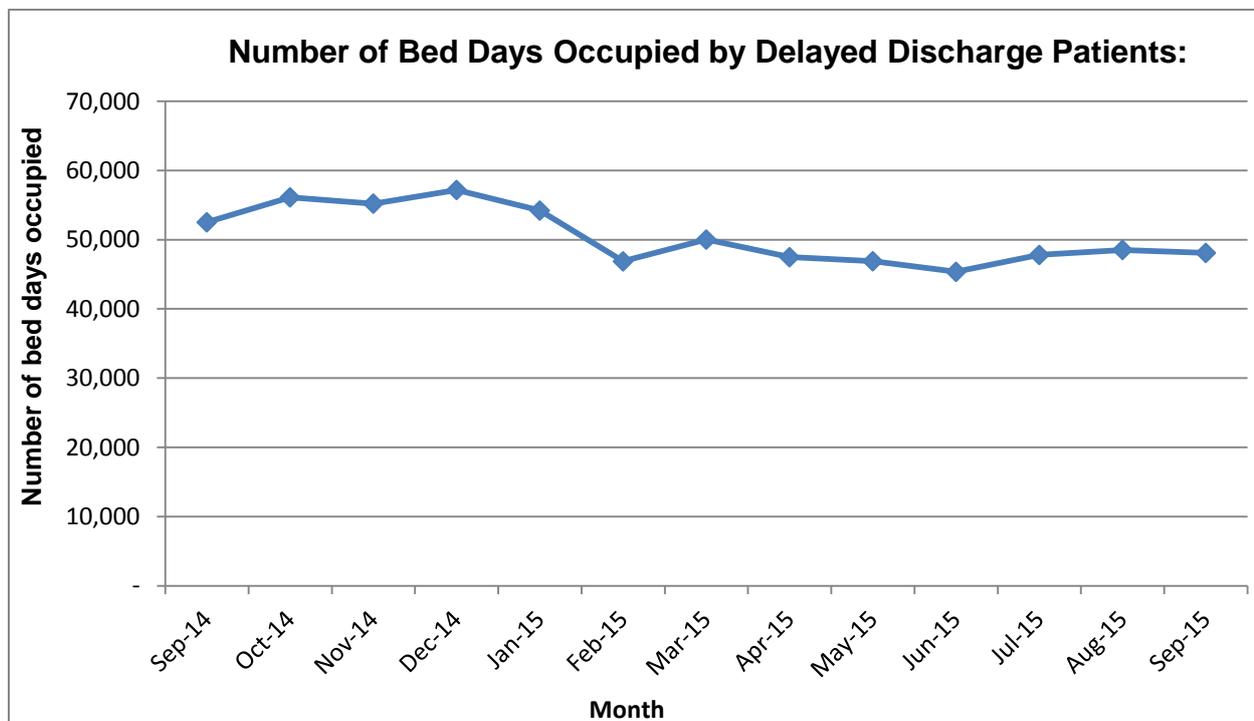

### About this Release

Information Services Division (ISD) publish on a monthly basis the number of NHSScotland patients who were judged to be clinically ready for discharge but who remained in a hospital bed (Delayed Discharges). This publication reports on the number of patients classified as a delayed discharge at the October 2015 census **and** the number of hospital bed days associated with delayed discharges for the month of September 2015.

### Hospital Bed Days associated with delays in discharge in September 2015

- In September 2015, there were 48,091 days spent in hospital associated with delays in discharge. This is an 8% decrease on the same period last year.
- Nationally, 70% of these bed days are occupied by patients aged 75 and over.

### Patients ready for discharge as at October 2015 census

- 1,280 patients were delayed at the October 2015 census. This is a 7% decrease on October 2014. Over a quarter of these delays (340) are for patients with specific complex care needs.
- At the census point, there were 551 patients who were delayed over two weeks. Although this is a 6% reduction on the corresponding period a year ago, this number has been rising since April 2015.
- The main reasons for these delays were:
  - 39% (216) awaiting place availability in a care home
  - 36% (198) waiting to go home
  - 11% (60) awaiting a community care assessment

## Background

ISD publishes information on delayed discharges to support local partnerships in the arrangements they make for the patient's timely, appropriate and safe transfer to the next stage of care.

The Scottish Government has legislated for the integration of health and social care through the [Public Bodies \(Joint Working \) \(Scotland\) Act 2014](#). Underpinning this legislation are nine [health and wellbeing outcomes](#). To measure achievement against these national outcomes a [core suite of integration indicators](#) have also been developed. There are two that relate directly to delayed discharges and include:

- Number of days people spend in hospital when they are ready to be discharged.
- Percentage of people who are discharged from hospital within 72 hours of being ready.
