

# Quarterly Acute Hospital Activity and NHS Beds Information for Scotland

Quarter ending September 2016

Publication Date – 20 December 2016

**Revised**

---

## About this release

The Information Services Division has updated a range of statistics on different aspects of hospital care, sourced from hospital administration systems across Scotland. These include information on trends in outpatient, inpatient and day case activity, and bed statistics.

## Main Points

### Outpatients

- There were 1,091,282 total outpatient attendances in the quarter ending September 2016, a slight decrease on the previous year (1,114,986), with a 3.4 % decrease in the last five years.
- Of the total outpatient attendances, there were 362,009 new attendances and 729,273 follow-up attendances.
- One in ten patients did not attend their outpatient appointment, which is similar to the same quarter in 2015.

### Inpatient and day case discharges

- In total there were 411,057 acute inpatient, day case episodes of care and transfers recorded in the quarter ending September 2016. This is an increase of 0.8 % from 407,633 in quarter ending September 2015.
- Driven by changes in recording practices and service redesign to the emergency care services in some NHS Boards the number of transfers have increased by around 9% to 109,828 episodes compared to the quarter ending September 2015.

### Bed statistics - **Revised**

- There were on average 15,462 available staffed beds for all acute specialties in September 2016. This is a decrease of 1.3% since the quarter ending September 2015.

## Background

Outpatient attendances are categorised as new or follow-up (return) attendances. Less complex operations may also be undertaken in an outpatient setting.

Inpatients refers to people who are admitted and either remain in hospital overnight or are expected to remain overnight but are discharged earlier.

Day cases refer to episodes where a person makes a planned admission to an available staffed bed in a hospital for clinical care, and requires the use of a bed (or trolley in lieu of a bed). For the purposes of national data, a day case episode refers to a patient who is admitted as a day case and is discharged on the same day as planned.

Available staffed beds is the number of bed days available for inpatient or day case care over a period of time.

A transfer is where a patient will already have been admitted to hospital and is either transferred between specialties or hospital, and will be part of the same continuous inpatient stay.
