About this Release
This release updates the prescribing of smoking cessation products in Scotland for financial years between 2003/04 and 2012/13. This includes the number of dispensed items, defined daily doses and gross ingredient cost. Data by NHS Board and annual trends are also shown.

Key Points
- Prescribing of smoking cessation products shows seasonal variation, with sharp peaks which start rising from January into February, culminating in March.
- Prescribing of smoking cessation products increased sharply just before the ban on smoking in public places was introduced in Scotland in March 2006.
- Of the prescribable treatments for smoking cessation, Nicotine Replacement Therapy is the most prevalent.
- Between the ban being introduced in 2006/07 and 2012/13 the number of dispensed items for Smoking Cessation increased from 254,095 to 624,107 an increase of (145.6%). Between 2011/12 and 2012/13 the increase was 40,391 items (up 6.9%).
- Between the ban being introduced in 2006/07 and 2012/13 the gross ingredient cost of Smoking Cessation items increased from £6,624,165 to £14,380,031 (up 117.1%). Between 2011/12 and 2012/13 it decreased by £573,349 (down 3.8%).
- This decrease in gross ingredient cost in 2012/13 in spite of the rise in number of items dispensed is a result of the decrease in average cost per item.

Background
Information on drugs which are indicated for the treatment of smoking cessation, are obtained from NHS prescriptions prescribed in Scotland that are dispensed in Scotland or elsewhere in the United Kingdom. All these prescriptions are dispensed by community pharmacies, dispensing doctors, a small number of speciality appliance suppliers and stoma providers. GPs write the vast majority of these prescriptions with the remainder written by authorised prescribers such as nurses and dentists. Also included are prescriptions written in hospitals that were dispensed in the community, but prescriptions dispensed within hospitals and items purchased over the counter are excluded.
On the 29th August 2008, the Public Health Service element of the new Community Pharmacy Contract was introduced in Scotland. This involves a program of up to twelve weeks in which people can visit their local pharmacist and be supported in their attempt to stop smoking, which may include prescribing of Nicotine Replacement Therapy.

**About ISD**

Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up.

Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

**Official Statistics**

Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website www.isdscotland.org/About-ISD/About-Our-Statistics/
