Prescribing Statistics -
National Therapeutic Indicators Data Visualisation

Data to June 2019

An Official Statistics publication for Scotland (Experimental)

Publication date: 15 October 2019

About this release

This release by Information Services Division shows a data visualisation of the 2018/19 Prescribing National Therapeutic Indicators (NTIs). The NTIs are a set of prescribing indicators that are used for quality improvement work. This publication is an update of prescribing data analysis up to June 2019. This visualisation presents information by NHS Board, Health and Social Partnership, General Practitioner (GP) practice, GP cluster and practice peer group.

Find out more

The data visualisation allows a more in depth and interactive visual analysis of the current National Therapeutic Indicators paper publication, published by the Effective Prescribing and Therapeutics Branch of the Scottish Government. The visualisation has a number of features, including a presentation of variation and prescribing trends, comparisons of Health and Social Care Partnerships, GP clusters and practice peer groups. For this update we have also provided a practice level dashboard showing comparisons between indicators, health and social care partnership trends and an NHS board indicator summary.
