Scottish Stroke Statistics
Year ending 31 March 2017
A National Statistics publication for Scotland
Publication date: 30 January 2018

About this release
This release from the Information Services Division provides an annual update on cerebrovascular disease in Scotland, including stroke, brain haemorrhage and ‘mini-stroke’. This publication includes information on hospital activity, operations, incidence, 30-day survival following first emergency admission, GP prescribing, mortality and ambulance service activity.

Main Points

- Cerebrovascular disease develops as a result of problems with the blood vessels supplying the brain. The incidence rate for cerebrovascular disease decreased over the last decade by 9.1%. Incidence rates were consistently higher in males than females.

- In the last decade, the mortality rate for cerebrovascular disease decreased by 35.1%.

Cerebrovascular disease – age and sex adjusted mortality rates per 100,000 population, Scotland, 2007-2016

- The mortality rate for cerebrovascular disease in the most deprived areas was 39.5% higher than in the least deprived areas in 2016.
The percentage of people surviving 30 days or more following their first emergency admission to hospital with a stroke improved slightly over the last ten years from 81.5% in 2007/08 to 85.3% in 2016/17.

The number of prescriptions for drugs to treat diseases of the circulation increased by 3.5% in the last ten years. Despite this increase, the cost of prescriptions dispensed for these drugs has fallen by 37.7% over the last ten years to £124.0 million in 2016/17, reflecting falls in drug prices for these conditions.

**Background**

Despite a substantial decrease in rates of death over the last decade, there were 4,153 deaths in Scotland in 2016 where cerebrovascular disease, including stroke, is the underlying cause.

Scotland has a high prevalence of the risk factors associated with cerebrovascular disease such as smoking and high blood pressure. Treating and preventing stroke is a national clinical priority for Scotland as outlined in the Stroke Improvement Plan.

**Further Information**

The Information Services Division publishes a range of cerebrovascular disease-related information. You can find all our information on [stroke section of the ISD website](#). More information is also available from the [Scottish Stroke Care Audit](#). Further information can be found in the [Stroke Statistics report](#).

Corresponding information on heart disease can be found on the [heart disease section of the ISD website](#).

The next update of this publication will be in January 2019.

**ISD and Official Statistics**

Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. [Further information about our statistics](#).
