Publication Summary

18 Weeks Referral To Treatment
Quarter ending 30 June 2012
Publication date – 28 August 2012

About this Release
This statistics release details the monthly summary of 18 Weeks Referral To Treatment statistics (includes data to 30 June 2012).

Key Points
- In June 2012, 92.4% of patient journeys for which an 18 Weeks Referral To Treatment (18 Weeks RTT) waiting time could be measured were reported as being within 18 weeks. The figures for April and May 2012 were 92.0% and 92.4%, respectively.
- In June 2012, a total of 109,984 patient journeys eligible under the 18 Weeks RTT target were identified. The waiting time could be measured for 100,106 of these patients (91.0%). It was not possible to calculate the waiting time fully for 9,878 patients. NHS Boards are in the process of fully implementing upgrades to their systems to improve the data collection.
- This target was due to be delivered from 31 December 2011. This target should be delivered for 90% of patients, allowing for example, the small proportion of cases where it is not clinically appropriate for the patient to be seen and treated within 18 weeks and also to take account of any exceptional increase in demand for secondary care services.

Background
Better Health Better Care which was published in December 2007 set out a commitment: "the 18 week Referral To Treatment (RTT) standard will address the whole patient care pathway, from receipt of a GP referral, up to the point at which each patient is actually admitted to hospital for treatment".

The 18 Weeks Referral to Treatment (18 Weeks RTT) target builds on previous waiting time targets, which set maximum waiting times for stages of treatment, for first outpatient consultation, diagnostic tests and for inpatient and day case treatment. 18 Weeks RTT focuses on the entire patient journey from the initial referral to the start of treatment,
including for the first time treatment undertaken in an outpatient setting, and promotes a holistic approach to providing clinically effective, safe and efficient care in a timely manner.

The responsibility for delivering the 18 Weeks RTT target lies with the NHS Board who receives the initial referral, as this Board will be responsible for agreeing with the patient and relevant clinicians the most appropriate pathway of care. In some cases patients may be initially referred to one NHS Board and then have an onward referral to another NHS Board for treatment. Due to the constraints in current hospital information systems in linking all stages of a patient's journey to measure their waiting time as mentioned above, these statistics are presented by NHS Board of Treatment, the NHS Board in which the patient's treatment was started. NHS Boards are in the process of fully implementing upgrades to their systems to improve the data collection.

The Scottish Government has determined that the 18 Weeks RTT target should be delivered for at least 90% of patients. This target allows, for example, the relatively small proportion of cases where it is not clinically appropriate for the patient to be seen and treated within 18 weeks and also to take account of any exceptional increase in demand for secondary care services.

These statistics are Official Statistics (i.e., still to be assessed by the UK Statistics Authority).

About ISD
Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up. Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD. Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website www.isdscotland.org/About-ISD/About-Our-Statistics/
