Introduction
Waiting times are important to patients and are a measure of how the NHS is responding to demand for services. Measuring and regular reporting of waiting times highlight where there are delays in the system and enables monitoring of the effectiveness of NHSScotland’s performance. Information Services Division (ISD) Scotland continues to be committed to improving the information on waiting times along with our key stakeholders, the NHS Boards and the Scottish Government.

This publication focuses on the two current cancer waiting times standards:

- **62 day standard** from receipt of referral to start of treatment for newly diagnosed primary cancers. This applies to:
  - Patients urgently referred with a suspicion of cancer by a primary care clinician
  - Screened positive patients referred through a national cancer screening programme
  - Direct referral to hospital (for example, self-referral to A&E)
- **31 day standard** from decision to treat to start of treatment for newly diagnosed primary cancers (whatever their route of referral).

Information for the 62 day standard is presented by NHS Board area of receipt of referral and information for the 31 day standard is presented by NHS Board of area of first treatment.

Details about previous cancer waiting times standards can be found [here](#). The cancer waiting times standards are applicable to adult (over 16 years of age at date of diagnosis) NHSScotland patients with a newly diagnosed primary cancer. Performance is monitored on the following cancer types:

- Breast
- Colorectal
- Head & neck
- Lung
- Lymphoma
- Ovarian
- Melanoma
- Upper Gastro-Intestinal (hepato-pancreato-biliary (HPB) and oesophago-gastric (OG))
- Urological (prostate, bladder, other)
- Cervical

A Non-Standard Technology is where highly specialised treatments by tumour site are not available in all three of the regional cancer networks. Such treatments cannot always be provided in all 3 regions from the outset due to a combination of factors, and where this occurs waiting times adjustments can be made to the waiting time for the patient. The list of current Non-Standard Technologies and the adjustments that can be made is reviewed periodically. The list was last reviewed with effect from 1 April 2016, based on date of first treatment, and identifies type of treatment by tumour site and whether an adjustment can be applied.

The link to the guidance is available [here](http://www.isdscotland.org/Health-Topics/Waiting-Times/Cancer/Guidance/). The cancer types affected by this review are head & neck, upper...
GI, and urological. This may affect the comparison of waiting times before and after 1 April 2016.

The 5% tolerance level (i.e. 95% rather than 100%) is applied to these standards, as for some patients, it may not be clinically appropriate for treatment to begin within the standard's time.

When making comparisons across Scotland, it should be noted that in smaller NHS Boards, particularly Island Boards, substantial quarter-on-quarter fluctuations in the percentage of patients that started treatment may represent the pathway of only one or two patients. Further, 90th percentiles have only been calculated where there are forty or more eligible patients within a population, due to the statistical aberration resulting from percentiles based on very small numbers.

Some data may not yet be finalised by NHS Boards and may be subject to change in future publications. However, this publication is considered to give a reasonable reflection of the current position. The quality of these statistics is considered to be fit for publication, and data quality aspects are described in the publication. Previously released information can be revised to reflect ongoing work by NHS Boards to improve data quality. Overall, the revised figures for Scotland remain relatively unchanged when compared to the previous quarters published. Specific information on data quality and accuracy is listed within the Data Quality section in Appendix 2. Information on any revisions to previously published figures is provided in the Revisions relevant to this publication section of the metadata in Appendix 3.

Previous 31 and 62 day standards are both included as performance measures in HEAT for data up to 31 March 2011. Further information on the HEAT Performance Measures can be found on the ISD NHSScotland Performance LDP web pages and the Scottish Government Scotland Performs LDP web pages.
Main points

In the period July to September 2016:

The **62 Day Standard** is that 95% of patients urgently referred with a suspicion of cancer will wait a maximum of 62 days from referral to first cancer treatment.

- 87.1% of patients started treatment within the 62 day standard, a decrease from 89.8% in the previous quarter.
- The 62 day standard was met by two** NHS Boards (NHS Borders and NHS Lanarkshire).
- One of the ten cancer types successfully met the 95% standard – melanoma (97.7%).

The **31 Day Standard** is that 95% of all patients will wait no more than 31 days from decision to treat to first cancer treatment.

- 94.3% of patients started treatment within this standard, a decrease from 95.7% in the previous quarter.
- The 31 day standard was met by 10 of 15 NHS Boards (NHS Ayrshire & Arran, NHS Borders, NHS Dumfries & Galloway, NHS Forth Valley, NHS Highland, NHS Lanarkshire, NHS Orkney, NHS Shetland, NHS Western Isles and NHS Golden Jubilee National Hospital).
- Eight of the 10 reported cancer types met the 31 day standard. 93.3% of patients waiting were treated within 31 days for breast cancer; this has decreased from 96.9% in the previous quarter. 85% of patients waiting were treated within 31 days for urological cancer, this has decreased from 87.4% in the previous quarter.

NHSScotland performance against the 62 day and 31 day standards

Please note that the vertical axis on this chart does not start at the origin (zero)
*Golden Jubilee National Hospital is only able to supply data for the 31 day standard as they are not in a position to refer patients but are involved in the treatment stage.

** Figures based on data snapshot (11/11/16). Following data snapshot, NHS Fife advised a data submission error which would change their 31 day performance to 92.8% (instead of 93.3%) and their 62 day performance to 87.1% (instead of 87.5%). NHS Fife will resubmit the correct information and this will be updated in the next publication (March 2017). NHS Ayrshire & Arran advised a discrepancy between their local reports and national figure which would change their 31 day performance to 99.0% (instead of 99.5%). NHS Dumfries & Galloway noted that two patients were missing from their figures. Their 62 day performance was 95.1% (instead of 94.9%). ISD are working with NHS Ayrshire & Arran and NHS Dumfries and Galloway to investigate and resolve these issues. The above revisions make no difference to the reported overall Scotland figures for 31 and 62 day standards.
Results and Commentary

Performance against the 62 day standard: Time from urgent referral with a suspicion of cancer, to first cancer treatment

The 62 day waiting time standard from referral to first cancer treatment is applied to all patients referred urgently with a suspicion of cancer and for screened-positive patients. The quarterly statistics within this publication relate to the period July to September 2016 alongside data from the previous four quarters.

During the period July to September 2016, 87.1% of eligible patients who were urgently referred with a suspicion of cancer started their first cancer treatment within 62 days of referral (Table 1a). This is a decrease from the previous period April to June 2016 (89.8%).

** Figures based on data snapshot (11/11/16). Please refer to footnotes in the Main Points for information received from some NHS Boards following snapshot.

In the period July to September 2016, two NHS Boards met the 62 day standard, NHS Borders and NHS Lanarkshire.

Variations in the percentage of patients seen within the 62 day standard result from a combination of hospital capacity and patient circumstances. The Data Quality section at the end of this report includes information provided by NHS Boards on reasons for large changes in numbers or unusual patterns in the data or changes in trends.

In July to September 2016, 93.6% of screened positive breast cancer patients started treatment within 62 days of urgent referral with suspicion of cancer (Table 1b, Chart 1b), compared to 95.9% in the previous quarter. 64.3% of referrals from the cervical screening programme started treatment within 62 days of referral, compared to 78.9% in the previous quarter. The percentage of patients referred from the colorectal screening programme was 71.7% seen within 62 days of referral compared to 72.0% in the previous quarter.

In the period July to September 2016, the 62 day standard was not met for breast, cervical, colorectal, head & neck, lung, lymphoma, ovarian, upper GI or urological cancer types (Table 1b, Chart 1b).

Information for each NHS Board split by cancer type can be found at Excel Table 1a and Table 1b.

Across all of Scotland, the median wait was 41 days, this has remained fairly stable over the last few years.

**Exclusions and Waiting Times Adjustments (62 day standard)**

Of all urgent referrals with a suspicion of cancer submitted in Scotland during July to September 2016, 124 (3.7%) were excluded from the standard performance calculations due to clinical reasons, or because the patient died before treatment, or refused all treatment.

The number of exclusions has increased from 3.5% during April to June 2016 to 3.7% during July to September 2016. Though, this has had little impact on the performance against the 62 day standard for Scotland.

Waiting times adjustments are applied to take into account periods of patient unavailability and medical suspensions. During July to September 2016, there were 523 occurrences of patient unavailability and 918 occurrences of medical suspension. Further detail can be found in Excel Table 5.
Performance against the 31 day standard: Time from the date of decision to treat to first cancer treatment

The 31 day standard applies to all eligible patients, regardless of the route of referral. The quarterly statistics within this publication relate to July to September 2016.

94.3% of eligible patients who had a decision to treat had their first cancer treatment within 31 days of referral (Table 2a), a decrease from 95.7% in the previous quarter.
Table 2a. Performance against the 31 day standard for all patients with a decision to treat that then went on to start treatment within 31 days of that decision: for all cancer types*, by NHS Board and Regional Cancer Network

** Figures based on data snapshot (11/11/16). Please refer to footnotes in the Main Points for information received from some NHS Boards following snapshot.

In the period July to September 2016, 10 of the 15 NHS Boards met the 31 day standard. The five that did not were NHS Fife, NHS Lothian, NHS Grampian, NHS Greater Glasgow & Clyde & NHS Tayside.

Variations in the percentage of patients seen within the 31 day standard result from a combination of hospital capacity and patient circumstances. The Data Quality section at the end of this report includes information provided by NHS Boards on reasons for large changes in numbers, unusual patterns in the data or changes in trends.

In the period July to September 2016, 88.8% of screened positive breast cancer patients started treatment within 31 days of decision to treat (Table 2b, Chart 2b), compared to 93.8% in the previous quarter. 100% of referrals from the cervical screening programme started treatment within 31 days of the decision to treat, compared to 94.7% in the previous quarter. The percentage of patients referred from the colorectal screening programme who started treatment within 31 days of decision to treat was 97.1%, compared to 96.4% in the previous quarter.

In the period July to September 2016, the 31 day standard was not met at the Scotland-level for referrals through the breast screening programme and urological cancer (Table 2b).

Information for each NHS Board split by cancer type can be found at Excel Table 2a and Table 2b.

** Figures based on data snapshot (11/11/16). Please refer to footnotes in the Main Points for information received from some NHS Boards following snapshot.

During the period July to September 2016, the median wait between the date of decision to treat and the first cancer treatment was 6 days; 90.0% of patients waited 28 days or less. These figures are similar to previous quarters’ data.

Exclusions and Waiting Times Adjustments (31 day standard)

In the period July to September 2016, 140 (2.4%) patients were excluded from the 31 day standard performance calculations due to clinical reasons, or because the patient either died before treatment, or refused all treatment.

The percentage of exclusions is similar to the previous quarter, and this has had little impact on the performance against the 31 day standard for Scotland.

Waiting times adjustments are applied to take into account periods of patient unavailability and medical suspensions. In the period July to September 2016, there were 250 occurrences of patient unavailability and 359 occurrences of medical suspension. Further detail can be found in Table 6.
Glossary

Eligible referral (62 day) – urgent referral submitted with a suspicion of cancer by a GP or GDP, or direct referral to hospital (self, GP, or NHS 24 referral to A&E or other), or referral from a National Cancer Screening Programme, excluding patients who had a clinically complex pathway, who died before treatment or refused treatment.

Eligible referral (31 day) - all referrals (urgent and non-urgent) submitted from all sources (regardless of route of referral), excluding patients who had a clinically complex pathway, who died before treatment or refused treatment.

Exclusion – patients who had a particularly complex clinical pathway, died before treatment or who refused treatment.

Median wait – the middle value of (Referral to Treatment days for 62 day standard or date of Decision to Treat to Treatment days for 31 day standard), with half of patients waiting less than that time, and half waiting more than that time. Medians are only calculated when there are three or more eligible patients.

Non-urgent referrals – referrals submitted where the source of referral is GP/GDP referral other or Other.

NOSCAN – North of Scotland CAnceR Network.

Percentile – the value of a variable below which a certain percent of observations fall. For example, the 90th percentile is the value (referral-to-treatment days) below which 90 percent of the waits may be found. The 50th percentile is also known as the median. 90th percentiles have only been calculated when there are forty or more eligible patients.

Referral – a request to a care professional, team, service, or organisation to provide appropriate care to a patient/client. A referral may be made by a person, team, service, or organisation on behalf of a patient/client, or a patient/client may refer him/herself.

SCAN – South East Scotland CAnceR Network.

Total referrals submitted – all referrals (urgent and non-urgent) submitted from all sources, i.e. regardless of the route of referral.

Upper GI – Upper Gastrointestinal.

Urgent referral – referral submitted with a suspicion of cancer by a GP or GDP, or direct referral to hospital (self, GP or NHS 24 referral to A&E or other), or referral from a National Cancer Screening Programme.

Waiting times adjustment – an adjustment (in days) applied to take into account periods of patient unavailability (e.g. because the patient did not attend an appointment) and/or medical suspension (e.g. the patient had another condition requiring treatment before cancer treatment could be started). Waiting Times adjustments are not made when delays are caused by hospital operational circumstances.

WOSCAN – West of Scotland CAnceR Network.

Further information on Cancer Waiting Times Data & Definitions can be found on the Guidance section of the website.

In addition, further details are also available in the ISD Data Dictionary of the Data Definitions and References section of the ISD website.

Appendix

A1 – Background Information

Data Collection and guidance

Cancer Waiting Times data are collected by cancer trackers and administrative staff (including medical secretaries) across NHSScotland, which are then recorded onto the NHS Boards’ cancer tracking systems.

Each NHS Board submits a monthly file which contains episode-level records for each newly diagnosed primary cancer referral, which began treatment in the previous calendar month, for which they were the Board of receipt of referral. Each record contains demographic information about the patient; key time points in the pathway (date of receipt of referral, date of decision to treat and date of first treatment); information on diagnosis and treatment; main reason for any adjustments to the waiting time; and, main reason for any breaches of the 62 and 31 day standard.

The adjusted waiting time in days and the total of any waiting times adjustments in days is calculated by NHS Boards for each record. Each record also contains a flag whether it meets any of the exclusion criteria (complex clinical pathway, died before treatment or who refused treatment).

Each quarter NHS Boards can resubmit monthly data to allow the most up to date information to be used for publication. This information is then validated and loaded onto the Cancer Waiting Times database to allow data interrogation and reporting.

Performance against the targets set out in Better Cancer Care – An Action Plan was achieved by March 2011; the timescale agreed by the Scottish Government. These targets are treated as National Standards from 1st April 2012 and continue to be monitored on a monthly and quarterly basis.

In June 2016 the Scottish Government published Beating Cancer: Ambition and Action.
A2 – Data Quality

This section provides information on the quality of data supplied by NHS Boards to ISD. ISD routinely seeks clarification from NHS Boards among other things where there may be large changes in numbers, unusual patterns in the data or changes in trends. These changes may be influenced by a variety of factors, including service changes/reconfiguration or data recording changes. The information below highlights where NHS Boards have provided comments on their data quality to ISD for this publication at the quality assurance stage.

It should be noted that in some cases where the 62 or 31 day standards have not been met for some cancer types this is partially due to small number of cases within individual Boards.

NHS Ayrshire & Arran

Data Quality
There is a slight discrepancy in performance reported by NHS Ayrshire & Arran compared to this national report. NHS Ayrshire & Arran report that 31 day performance was 99.0% instead of 99.5%. ISD and NHS Ayrshire & Arran continue to investigate this matter.

General/Service Issues
Clinical management teams continue to address particular areas of challenge in the cancer pathway. These include waiting times for first outpatient appointments in a small number of specialties and waiting times associated with diagnostic services.

NHS Borders

Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues
The breaches were noted as correct, however it was highlighted that for some cancer types the percentages are based on small numbers.

NHS Dumfries and Galloway

Data Quality
There is a slight discrepancy in performance reported by NHS Dumfries & Galloway compared to this national report. Their 62 day target was 95.1% (instead of 94.9%). ISD are working with NHS Dumfries & Galloway to investigate and resolve.

General/Service Issues
No additional issues received
NHS Fife

Data Quality
NHS Fife identified two further patients who were treated in September but were not submitted due to a delay in reporting pathology samples not marked as urgent. A review of reporting systems and capacity has been undertaken and improvements identified.

62 days
NHS Fife had 194 eligible referrals. The number of patients treated within 62 days was 87.1% and not 87.5%.

31 days
NHS Fife had 266 eligible referrals. The number of patients treated within 31 days was 92.8% and not 93.3%.

General/Service Issues
62 days
There continues to be a number of areas of risk which contribute to NHS Fife’s ability to achieve this target. Capacity issues for outpatients and surgical patients for the following cancer types: breast, lung, gynaecology and urological. Significant capacity issues within radiology impacted on breast and lung outpatient appointments.

Support from neighbouring Boards has been secured and this has improved capacity.

31 days
Lack of surgical capacity was the main reason for delays, particularly in urological.

NHS Forth Valley

Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues
62 days
An increasing number of patients are breaching the target due to the number of necessary steps involved on the pathway without significant delay at any step. The standard pathways have changed (sometimes significantly) since these targets were initially established.

Although we can exclude clinically complex cases from analysis we cannot make any adjustments to these cases where pathways have by necessity become prolonged.

NHS Forth Valley are continuing to experience an increase in demand in Colorectal and are experiencing capacity issues. Work is underway to reduce these waits. Discussion is ongoing with endoscopy on ways to reduce the wait. The Colorectal cancer team are reviewing their vetting practice and re-prioritising referrals. Extra theatres are sometimes available however due to consultant’s other clinical commitments it is not always possible to match consultant availability with the theatres available. NHS Forth Valley continue to review and redesign pathways to improve the efficient utilisation of available capacity.
Since the creation of the 62 day target the lung cancer pathway has introduced PET to their pathway which can add up to 14 days to the patients pathway. There are no preventable/avoidable delays within the patient's pathway. There now seems to be patients who have moved through the process from referral to treatment (without significant delay at any step) and fail the target because of the number of necessary steps involved.

31 days
Extra theatres are sometimes available however due to consultant's other clinical commitments it is not always possible to match consultant availability with the theatres available. We continue to review and redesign pathways to improve the efficient utilisation of available capacity.

NHS Golden Jubilee Hospital
Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues
No comments required.

NHS Grampian
Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues

62 days
Delays are partly attributable to staffing shortages, recruitment is ongoing. Delays for treatment are also related to patients awaiting complex treatments such as robotic surgery and SABR Radiotherapy.

31 days
Delays for treatment are partly attributable to lack of theatre capacity. Delays for treatment are also related to patients awaiting complex treatments such as robotic surgery and SABR Radiotherapy.

NHS Greater Glasgow & Clyde
Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues

62 days
An increasing number of patients are breaching the target due to the number of necessary steps involved for some cancer pathways. NHS Greater Glasgow and Clyde are also experiencing an increase in the number of referrals received. A number of actions have been identified to improve performance and an implementation plan is in place.
31 days

Main pressures for the 31-day target include surgical capacity for breast screening and urological. A number of actions have been identified to improve performance and an implementation plan is in place.

NHS Highland
No comments provided.

NHS Lanarkshire
No comments provided.

NHS Lothian

Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues

62 days
NHS Lothian remains concerned about the current 62 day performance. Urological and colorectal in particular continue to be challenging, and actions are in place to bring down waiting times and improve performance.

31 days
No issues to highlight

NHS Orkney
No comments provided

NHS Shetland

Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues

62 days
The breaches were noted as correct. Fluctuations are due to small numbers.

31 days
No issues to highlight.
NHS Tayside
Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues
61 days - The breaches were noted as correct.
31 days - The breaches were noted as correct.

NHS Western Isles
Data Quality
Figures give a complete and accurate account of data submitted for the publication.

General/Service Issues
61 days - The breaches were noted as correct.
31 days - The breaches were noted as correct.

<tr>
<td>Timeframe of data and timeliness</td>
<td>The publication includes data for the last five quarters and covers the time period 1 July 2015 to 30 September 2016</td>
</tr>
<tr>
<td>Continuity of data</td>
<td>To remain relevant to the changing set of targets (as published in Better Cancer Care - An Action Plan), the cancer waiting times statistics published previously by ISD were replaced with a new series of figures. The first set of these new figures relating to these targets were first published in June 2010. The table below° provides information on the various target cohorts and their date of first publication. Performance against these targets was achieved by March 2011; the timescale agreed by the Scottish Government. These targets are considered as National Standards from 1st April 2012 and continue to be published on a quarterly basis.</td>
</tr>
</tbody>
</table>
When making comparisons across Scotland, it should be noted that some areas reported on contain small numbers. For example, in Island NHS Boards there may be a substantial quarter-on-quarter fluctuation in the percentage of patients that started treatment within 62/31 days, which may represent the pathway of only one or two patients. Due to the effects of small numbers, 90th percentiles have only been calculated where there are forty or more eligible patients within a population.

Revisions statement

Figures contained within each publication may also be subject to change in future publications. See ISD Statistical Revisions Policy.

Revisions relevant to this publication

If NHS Boards discover that data submitted for publication is incorrect, or that data is missing, further re-submissions can be made up until the publication submission deadline date. Any revised figures will then be reflected within the current publication. Figures contained within each publication may also be subject to change in future publications, as submissions may be updated to reflect a more accurate and complete set of data submissions.

Detail of revisions to this publication:

62 day standard:

NHS Greater Glasgow and Clyde resubmitted April to June 2016 data. The 62 day standard comparative percentage figure for NHSScotland has increased to 89.8% (previously 89.7%).

The 31 day standard:

NHS Fife and NHS Greater Glasgow & Clyde resubmitted April to June 2016 data. The 31 day standard comparative percentage figure for NHSScotland has increased to 95.7% (previously 95.6%).

Concepts and definitions

Performance against the targets set out in Better Cancer Care – An Action Plan was achieved by March 2011; the timescale agreed by the Scottish Government. These targets are considered as National Standards from 1st April 2012 and continue to be published on a quarterly basis. The cancer waiting times standards are applicable to adult (over 16 at date of diagnosis) NHSScotland patients with a newly diagnosed primary cancer. To be included, the cancer type must fit into one of the listed cancer types in the Cancer Waiting Times Data and Definitions Manual. This manual, and further information, is available within the Guidance section of the website.

Relevance and key uses of the statistics

The CWT team, within ISD, works in partnership with the SG Cancer Performance Support Team and NHS Boards to measure NHSScotland’s performance against current Cancer Waiting Times Standards. Other uses of the data include: support of NHS Boards, researchers, charities, media, and public, and to fulfil Freedom of Information requests and
| **Accuracy** | The quality of these statistics is considered fit for publication; data quality aspects are described within each publication. Fitness for publication exercises have been carried out by ISD for the 62 day performance and have shown that completeness of the 62 day cohort is within an acceptable range and is fit for publication. Details of all FFP exercises can be found here. Case ascertainment is assessed each quarter for the 31 day standard. The latest figures can be found within Tables 2a and 2b in the list of tables above.

ISD regularly carries out data quality exercises to ensure that data is recorded in an accurate and consistent manner across NHSScotland. Information on these exercises can be found on the [Data Quality](#) section of the website. In early 2012, ISD Cancer Waiting Times undertook a data quality project to assure that data submitted for Bowel Screening patients is recorded accurately and consistently. A paper highlighting the outcome of this project can be found here.

Responsibility for collating and submitting the data to ISD lies with the NHS Board that received the patient's initial referral to secondary care. Information on data quality, service issues and accuracy specific to this publication can be found in Appendix 2.

The Data Quality Assurance team within ISD carry out data quality exercises on cancer waiting times data. A report of the results from the latest exercise can be found here.

| **Completeness** | A patient will be excluded from reporting against the Cancer Waiting Times standards for the following reasons:

1. The patient chooses to have any part of their pathway outwith NHSScotland. If this is before the decision to treat, they will be excluded from the 62 day standard; if after the decision to treat, they will be excluded from both standards.

2. The patient died before treatment

3. The patient refused all treatment

4. The patient was deemed a clinically complex case by the lead cancer clinician of the responsible NHS Board

| **Comparability** | Links to Cancer waiting time information published in England, Wales and Northern Ireland can be found below. There will be differences in the measures used and collection methods of cancer waiting times statistics, as well as differences in service structures between the administrations. Users need to carefully read the publications when making comparisons. Each of the four countries has measures for 62 and 31 days, however, the inclusion criteria, start/stop dates and cancer types included are not consistent across all 4 countries.

| **Accessibility** | It is the policy of ISD Scotland to make its web sites and products accessible according to published guidelines. |
| **Coherence and clarity** | Statistics are presented within Excel spreadsheets and PDF. Performance data are reported on a national, NHS Board and Regional Cancer Network level, broken down by cancer type and quarter. Distribution of waits data are reported on a National level by cancer type and quarter. Exclusions and Adjustments are reported for All Cancer Types at national, NHS Board and Regional Cancer Network level, broken down by quarter.  
Further features to aid clarity:  
1. Performance data, Distribution of Waits, and Exclusions and Adjustments are available in separate tables to enable users to select a single measure for analysis.  
2. All tables are printer friendly.  
3. All Scotland and All Cancer Types data for the latest quarter are presented first, with the option to view spreadsheets down to Board, Cancer Type level by quarter.  
4. Key data presented graphically.  
5. Tables use drop down menus to display data by a single Board, Regional Cancer Network, Quarter and Cancer Type. |
<p>| <strong>Value type and unit of measurement</strong> | Distribution of waits (%) for NHSScotland and all Cancer Types combined. Distribution of waits (%) for NHSScotland by Cancer Type. Number of eligible referrals, number and percentage of eligible referrals that started treatment within 62/31 days, Maximum Wait (Days), Median Wait (Days), 90th Percentile (Days) for NHSScotland, NHS Board and Regional Cancer Network. Trends in performance for all Cancer Types combined at NHSScotland, NHS Board and Regional Cancer Network level. Total number of referrals submitted, number and % of exclusions, number of patient and medical delays, median waiting time adjustment (days) for patient and medical delays; at NHSScotland, NHS Board and Regional Cancer Network level for all cancer types combined. |

A4 – Early Access details (including Pre-Release Access)

Pre-Release Access

Under terms of the "Pre-Release Access to Official Statistics (Scotland) Order 2008", ISD are obliged to publish information on those receiving Pre-Release Access ("Pre-Release Access" refers to statistics in their final form prior to publication). The standard maximum Pre-Release Access is five working days. Shown below are details of those receiving standard Pre-Release Access.

Standard Pre-Release Access:

- Scottish Government Health Department
- NHS Board Chief Executives
- NHS Board Communication leads
A5 – ISD and Official Statistics

About ISD
Scotland has some of the best health service data in the world, combining high quality, consistency, national coverage, and the ability to link data to allow patient based analysis and follow up.

Information Services Division (ISD) is a business operating unit of NHS National Services Scotland and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

**Purpose:** To deliver effective national and specialist intelligence services to improve the health and wellbeing of people in Scotland.

**Mission:** Better Information, Better Decisions, Better Health

**Vision:** To be a valued partner in improving health and wellbeing in Scotland by providing a world class intelligence service.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

ISD’s statistical publications are currently classified as one of the following:

- National Statistics (i.e. assessed by the UK Statistics Authority as complying with the Code of Practice)
- National Statistics (i.e. legacy, still to be assessed by the UK Statistics Authority)
- Official Statistics (i.e. still to be assessed by the UK Statistics Authority)
- other (not Official Statistics)
