Chronic Pain Waiting Times in NHSScotland
Quarter ending 30 September 2018

An Official Statistics publication for Scotland (Experimental)

Publication date: 11 December 2018

About this release
This release by Information Services Division (ISD) on the length of time new patients waited for a first appointment at NHS chronic pain and pain psychology clinics is shown by NHS Board for quarter ending 30 September 2018. These data are considered experimental and should be used with caution, as there are data quality issues and incomplete data from Pain Psychology Clinics.

Main Points

Pain Clinics

Twelve out of fourteen NHS Boards offer pain clinics to patients and provide data to ISD on how long patients wait to attend their first appointment based on the 18 weeks referral to treatment (RTT) Standard.

- Between 1 July and 30 September 2018, there were 4,985 new patients referred to a pain clinic. This compares with 5,033 referrals in the previous quarter.
- Of the 2,734 patients who attended (were seen) for their first appointment between 1 July and 30 September 2018, 1,979 (72.4%) attended within 18 weeks, comparable to the previous quarter (71.6%).
- Of the 4,535 patients who were still waiting for their first appointment at 30 September 2018, 675 (14.9%) had been waiting for more than 18 weeks.
- NHS Fife, NHS Lanarkshire, NHS Lothian, NHS Orkney, NHS Shetland and NHS Western Isles saw all their patients within 18 weeks.
- 1,360 patients were removed from a waiting list for reasons other than being seen. 373 (11.8%) patients did not attend their first appointment and did not notify the hospital.

Length of time patients waited from referral to first appointment at a Chronic Pain Clinic, Quarter ending 30 September 2018, NHSScotland

For wait time banding calculations, see here
Pain Psychology Clinics

Due to the developmental nature these data should be interpreted with caution. Ten NHS Boards provide Pain Psychology Clinics, but only seven can provide data.

- There were 480 new patients referred to pain psychology clinics between 1 July and 30 September 2018.
- Of the 206 patients who attended their first appointment in this quarter, 86 (41.7%) were seen within 18 weeks.
- Of the 664 who were still waiting for their first appointment as at 30 September 2018, 161 (24.2%) had been waiting for more than 18 weeks.
- 138 patients were removed from a waiting list for reasons other than being seen. 39 (12.6%) patients did not attend their first appointment and did not notify the hospital.

Background

Waiting times for chronic pain services are monitored as part of the 18 weeks RTT standard. Pain services are part of a centralised service (usually with consultant led outpatient appointments) to which an individual is referred to a clinic for chronic pain assessment and management. The pain psychology service is provided for pain management led by psychological therapy specialists. The data presented here has been adjusted for periods of patient unavailability. Some referrals will not be accepted as the request to a healthcare professional or to an organisation to provide healthcare to a patient may not be appropriate. Data on return patients is not available as only two NHS Boards have a process in place to capture this information on their IT Systems. Return patient data are therefore not collected by ISD.
