Cancer Waiting Times in NHSScotland
1 January to 31 March 2019
A National Statistics publication for Scotland
Publication date: 25 June 2019

About this release
This release by Information Services Division (ISD) presents the quarterly update of Cancer Waiting Times statistics. It reports on the two waiting times standards used to measure the time patients have waited for their first cancer treatment. Data for the quarter ending March 2019 are presented by NHS Board, Regional Cancer Network and cancer type.

Main Points
The 62 Day Standard states that 95% of patients urgently referred with a suspicion of cancer will wait a maximum of 62 days from referral to first cancer treatment
- 81.4% of patients started treatment within the 62 day standard, compared to 82.7% in the previous quarter and 85.0% for quarter ending March 2018.
- The 62 day standard was met by three NHS Boards: NHS Lanarkshire, NHS Orkney, and NHS Shetland.

The 31 Day Standard states that 95% of all patients will wait no more than 31 days from decision to treat to first cancer treatment
- 94.9% of patients started treatment within the 31 day standard, which is the same as in the previous quarter and 93.5% for quarter ending March 2018.
- The 31 day standard was met by ten NHS Boards: NHS Ayrshire & Arran, NHS Borders, NHS Dumfries & Galloway, NHS Fife, NHS Forth Valley, Golden Jubilee National Hospital, NHS Lanarkshire, NHS Orkney, NHS Shetland, and NHS Western Isles.

NHSScotland performance against the 62 day and 31 day standards

Note: Filled points indicate quarter in which standard was met.
Background

In October 2008, the Scottish Government published Better Cancer Care - An Action Plan. The statements in the Action Plan formed the basis for the current standards for cancer waiting times where 95% of all eligible patients should wait no longer than 31 or 62 days. A 5% tolerance level was applied to these targets as, for some patients, it may not have been clinically appropriate for treatment to begin within target. In March 2016, the Scottish Government published Beating Cancer: Ambition and Action.

ISD works in partnership with the Scottish Government Cancer Performance Support Team and NHS Boards to measure NHS Scotland’s performance against the National Standards and to provide a wide range of users with faster access to the statistics they need.

The standards are based on the 10 main cancer types: breast, cervical, colorectal, head & neck, lung, lymphoma, ovarian, melanoma, upper gastrointestinal (hepatopancreato-biliary and oesophago-gastric), and urological (prostate, bladder, other).

Golden Jubilee National Hospital is only reported against the 31 day standard since they do not refer patients but are involved in the treatment stage.

The figures presented are based on patient based data taken at snapshot (18 May 2019).
