Chronic Pain Waiting Times in NHSScotland
Quarter Ending 30 June 2019

Official Statistics publication for Scotland (Experimental)
Publication Date: 10 September 2019

About this release
This release by Information Services Division (ISD) shows the length of time new patients waited for a first appointment at NHS chronic pain and pain psychology clinics by NHS Board for quarter ending 30 June 2019. These data are considered experimental as data relating to pain psychology clinics vary in completeness and quality.

Main Points

Pain Clinics

All NHS Boards offer pain clinics and provide data to ISD on how long patients wait to attend their first appointment based on the 18 weeks referral to treatment (RTT) Standard.

• The number of new patients referred to Chronic Pain clinics has increased. Between 01 April 2019 and 30 June 2019, there were 5,424 new patients referred to a pain clinic, compared to 5,249 referrals in the previous quarter.
• Of the 2,961 patients who attended (were seen) for their first appointment, 1,927 (65.1%) attended within 18 weeks of referral. This compares with 63.8% the previous quarter.
• Of the 5,034 patients who were still waiting for their first appointment at 30 June 2019, 728 (14.5%) had been waiting for more than 18 weeks.
• There is variation between different NHS boards as to how long patients waited for their first appointment at Chronic Pain clinics. No patient waited more than 18 weeks in NHS Borders, NHS Fife, NHS Lanarkshire, NHS Orkney, NHS Shetland and NHS Western Isles.
• 1,555 patients were removed from a waiting list for reasons other than being seen.
• 377 (11.9%) patients did not attend their first appointment and did not notify the hospital.

Length of time patients waited from referral to first appointment at a Chronic Pain Clinic, Quarter ending June 2019, NHSScotland
Pain Psychology Clinics

Due to variable quality of these data, they should be interpreted with caution. Ten NHS Boards provide Pain Psychology Clinics, but only seven can submit data. NHS Grampian have suspended their pain psychology service, whilst they recruit a psychologist.

- There were 507 new patients referred to pain psychology clinics between 01 April 2019 and 30 June 2019.
- Of the 337 patients who attended (were seen) for their first appointment, 232 (68.8%) attended within 18 weeks of referral.
- Of the 476 who were still waiting for their first appointment as at 30 June 2019, 30 (6.3%) had been waiting for more than 18 weeks.
- 218 patients were removed from a waiting list for reasons other than being seen.
- 53 (11.6%) patients did not attend their first appointment and did not notify the hospital.

Background

Waiting times for chronic pain services are monitored as part of the 18 weeks RTT standard. Pain services are part of a centralised service (usually with Consultant or Psychologist led outpatient appointments) to which an individual is referred to a clinic for chronic pain assessment and management. The data presented here has been adjusted for periods of patient unavailability. Some referrals will not be accepted as the request to a healthcare professional or to an organisation to provide healthcare to a patient may not be appropriate. Data on return patients is not available as only two NHS Boards have a process in place to capture this information on their IT Systems. Return patient data are therefore not collected by ISD.
